NOTE TO USERS

Changes occur from time to time in tables contained in this review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, bench mark data, etc.

Changes in this issue are as follows:

Tables 43, 44, 45: Inventories, Shipments and Orders in Manufacturing, by Economic Use Groups

Economic use groups based on the 1960 Standard Industrial Classification have been introduced with this issue. Table 43, shipments and unfilled orders, Table 44, inventory owned and raw materials, and Table 45, goods in process and finished products, contain unadjusted and seasonally adjusted series for seven economic use groups.

The series have been seasonally adjusted by the X-11 variant of the United States Bureau of the Census Method II seasonal adjustment program. Adjustments made for trading-day variation were derived from actual variations in the data.

The unadjusted series from 1961 forward are published in the July issue of "Inventories, Shipments and Orders in Manufacturing Industries", Catalogue No. 31-001. The seasonally adjusted series for the period 1961 to date will be published in the January 28 issue of the Weekly Supplement to the Review, Catalogue No. 11-004.

Table 46: Tobacco and Beverages

Tobacco: Starting with January 1968, "production of tobacco products" became "manufacturers' production". Prior to this date production was indicated by the use of excise duty stamps. The resulting break in the series, however, is relatively insignificant. New series on sales of tobacco products are also provided.

Beverages: The unit of measure for beer production has been changed to thousand gallons from thousand barrels using the conversion factor 25 gallons per barrel of beer.

Table 114: Security Prices

This table has been expanded to provide two supplementary series, "Uraniums" and "Primary oils and gas". Historical data can be found in "Prices and Price Indexes", DBS Catalogue No. 62-002.

TECHNICAL NOTE No. 4

HISTORICAL DATA

Period Commencing January 1961

The monthly series from January 1961 to July 1968 as published in the July issue of the publication "Inventories, Shipments and Orders in Manufacturing Industries", DBS Catalogue No. 31-001, together with estimates for subsequent months are the most recently revised data. All data are comparable at all industry levels and are based on the 1960 Standard Industrial Classification. Previously published data for the period from January 1965 to June 1968 were revised for this July issue to reflect projections of the 1965 census of manufacturers values and to incorporate various other changes such as improvements in the sample coverages, and the use of data reported too late for inclusion in the initial compilations. Although formerly published data for the period 1961-1964 had previously been adjusted to corresponding annual census values as they became available, and to reflect other changes in the annual census, further minor revisions, to some of these monthly series were necessary to bring them into line with the final published census data. The monthly series for 1961 to date now published thus supersede all previously published data for the same period.

Period January 1958 to December 1960

The revision to the monthly series to incorporate the change to the 1960 Standard Industrial Classification which had been extended back to the period of 1958-1960, was first published in the first issue of 1963. These monthly data were again revised later to incorporate the adoption by the census of manufactures of a new definition of an establishment as a reporting unit. Only the revised data for 1960, however, were published in the March issue of 1964. Therefore, there is a small break in continuity at January 1960 between the published monthly series for 1958-1959 and for 1960 and later years.

It should be noted, however, that even the revised data for 1960 published in 1964 are not entirely comparable with the series from 1961 on, because some other changes introduced by the census of manufactures to reflect further implementation of the establishment concept were not made to historical data for years prior to 1961. The most significant changes occurred in the railroad rolling stock industry where the activity of the railroad repair shops was transferred to the railway transport industry, and the smelting and refining industry where the mining portion of the activity of integrated companies was separated and transferred to the mining industry. These further changes in the census had also been incorporated into the monthly series back to 1961 and published in the annual revised monthly issues for July 1965 and December 1966.

Period 1949 to December 1957

Prior to 1958, the monthly series were based on the 1948 Standard Industrial Classification, which thus creates another break of continuity with the series of later years. Monthly estimates in actual dollar values of manufacturers' shipments, inventories and orders based on the 1948 Standard Industrial Classification and on a revised basis were first published in the December 1955 issue for data back to January 1952. Inventories only, for certain economic use groups, are available in actual dollar values for 1949-1951, as published in the "Revised Base Series 1949-1951", DBS Reference Paper No. 53, 1954. Shipments as well as inventories for 1949-1951, presented in the form of index numbers, are also available in this issue.

Period January 1946 to December 1948

The first monthly report on manufacturers' inventories and shipments was published in February 1947 when actual dollar value estimates for data back to October 1946 were presented. However, the presentation of these data was later changed to index numbers, which were first published in the April 1948 issue. Data back to 1946 were provided for inventories and to 1947 for shipments.

General

Since the monthly series are constantly subject to later revision in order to incorporate new annual benchmarks and various other changes and adjustments which usually become necessary, users are advised to consult the most recent monthly issues of the publication and collect the data backward in order to obtain the latest revisions of the historical series. The following table summarizes the periods for which data are available on a comparable basis:

Monthly Series of Manufacturers' Shipments, Inventories and Orders published for 1946 to 1968

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE, THIRD QUARTER 1968

Introductory Review

In the third quarter the gross national product reached a level of $67.6 billion, seasonally adjusted at annual rates, continuing the more rapid pace of economic activity since the slowdown in the latter half of 1967. The output of goods and services increased by 2 per cent. Expansion of domestic demand intensified, paced by a pronounced upsurge in personal expenditure.

With a rise in the price component of 0.8 per cent — lower than in the previous quarter — the increase in GNP in real terms was 1.1 per cent. Together with earlier advances in the year, the increase in volume has been 4.5 per cent from the fourth quarter of 1967.

With the data now available, it is possible to suggest orders of magnitude for the value of GNP for the entire year. If, for example, there were no increase in the fourth quarter after adjustment for seasonal variation, the advance from 1967 would be 7.4 per cent. If a 2 per cent rise were assumed, the increase for the year would be 7.9 per cent.

Total demand increased by over 2 per cent in the third quarter, compared with 1½ per cent in the second. Exports declined after large gains in the first half of the year, while domestic demand increased by a substantial 3 per cent. After weakening in the second quarter, personal outlays jumped by over 3 per cent, the largest rise in two years; the greatest percentage advance was in durables, reflecting mainly a 16 per cent gain in new car purchases, but widespread increases also occurred among non-durable and service components. Business gross fixed capital formation rose by 3½ per cent from the revised second quarter, largely the result of a 7½ per cent increase in expenditure on machinery and equipment; construction outlays increased marginally as residential construction slipped fractionally from the high second quarter level and the non-residential component continued the 1968 pattern of small gains. Accumulation of non-farm business inventories continued in the quarter, with the main strength at the manufacturing level. Government expenditure increased by less than 1 per cent, all at the federal level.

In the external sector, the deficit on current account on a national accounts basis stood at $480 million, as exports of goods and services declined by 1 per cent after strong increases in the first and second quarters, while imports rose 3 per cent after remaining virtually flat in the previous quarter. The merchandise surplus declined by $436 million, as exports decreased by 1½ per cent and imports advanced 2 per cent; the non-merchandise deficit widened by $276 million as exports declined marginally and imports rose 5½ per cent. Increased demand for machinery and equipment and consumers' services were reflected by higher imports of producers' equipment and a jump of almost 25 per cent in payments in the tourist and travel account.

Net corporation profits before taxes rose a further 5½ per cent after the large second quarter advance while gross profits, which include capital consumption allowances, increased by 3 per cent. Labour income advanced by 2 per cent, as the gain in goods-producing industries slowed from 3 per cent in the second quarter to 1 per cent. Non-agricultural employment increased by less than 1 per cent, while the unemployment rate was almost unchanged at 5.1 per cent of the labour force.

Price Movements

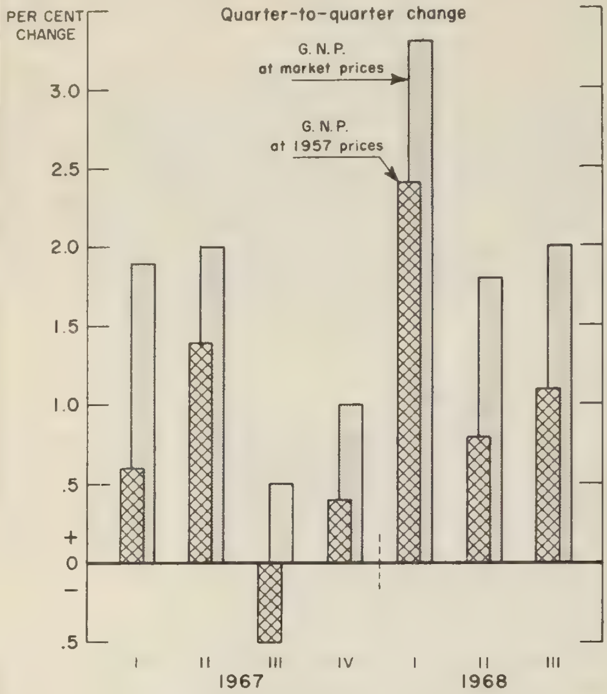
In the third quarter, prices rose by 0.8 per cent, a lower rate than the 1.0 per cent advance of the previous quarter. Lower rates of increase were registered in the price indexes of business gross fixed capital formation, exports and imports, while personal expenditure prices advanced at the same rate as in the preceding quarter.

The personal expenditure price index registered a second successive increase of 0.9 per cent, as a lower rate of increase in goods offset an acceleration in the price component of services. The service index rose by 1.5 per cent, the highest rate in four quarters; increases of 3.0 per cent and 2.2 per cent respectively were recorded in the prices of purchased transportation and recreation, while the rent component continued its upward trend with a 1.4 per cent rise. Non-durable prices rose by 0.6 per cent, a slightly lower rate than in the second quarter. All items except alcoholic beverages showed increases, with the larger gains occurring in the indexes for fuel, electricity, newspapers and magazines. Food prices, after declining fractionally in the preceding three months, advanced by 0.6 per cent; declines occurred in the prices of fresh fruits and vegetables while increases were noted in the prices of meat and miscellaneous groceries. Durable goods prices declined fractionally, with lower prices for new automobiles and household electrical appliances almost offset by increases for furniture and jewellery.

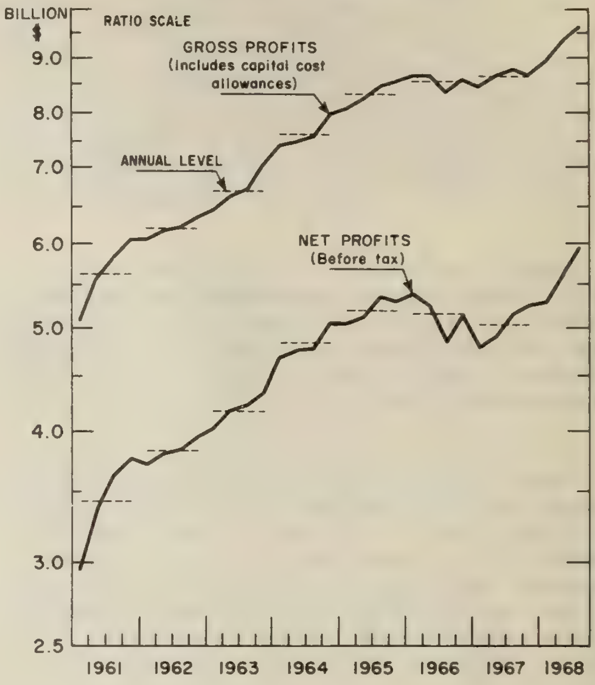
The price of business gross fixed capital formation increased by 0.8 per cent, the lowest rate in four quarters. Prices for machinery and equipment rose by 1.0 per cent following a slight decline in the second quarter, while the rate of increase for construction eased noticeably.

The price indexes of both exports and imports increased fractionally, with declines in the merchandise; components offset by higher prices for services. Contributing to the lower prices for merchandise exports were declines in crude petroleum, natural gas, newsprint paper, iron ore and zinc; particularly notable was a drop of 12.7 per cent in the price of copper.

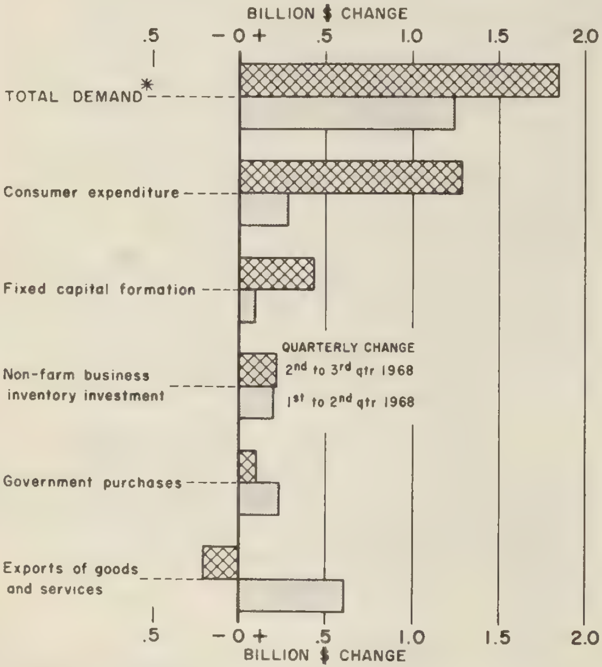
G.N.P. in the third quarter rose 2 per cent at current prices and 1.1 per cent in real terms.



Third quarter net corporation profits rose to a peak level 5½ per cent over the second quarter.

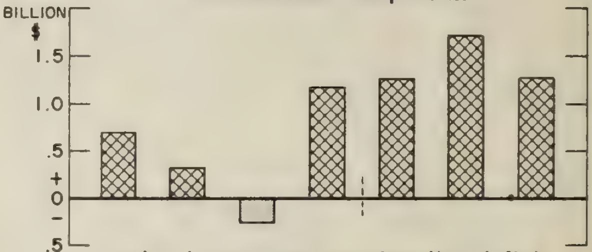


Total demand rose $1.8 billion, or 2.2 per cent, paced by consumer and business spending.

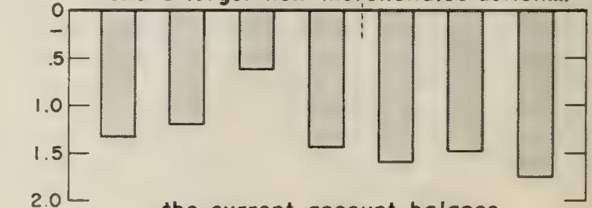


*G.N.P. + Imports

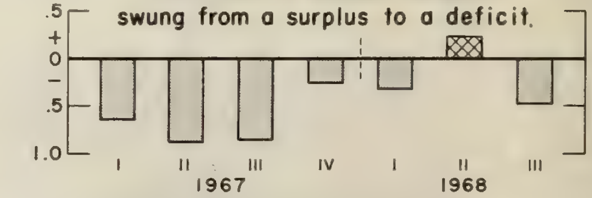
Because of a decline in the merchandise surplus....



and a larger non-merchandise deficit....



the current account balance swung from a surplus to a deficit.



Revised figures used for 1967 current account

The Components of Demand

Personal Expenditure on Goods and Services

Personal expenditure reached a level of nearly $41.5 billion, seasonally adjusted at annual rates, an increase of over 3 per cent from the second quarter. All three major aggregates contributed to the advance, the largest in two years, but most prominent was the 8½ per cent increase in outlays for durables.

The rise in durables was heavily concentrated in new car purchases, which advanced almost 16 per cent; expenditures on cars produced in North America rose by 15 per cent after a decline in the previous quarter, while the overseas-produced cars component registered an increase of almost 25 per cent. Other durable items showing significant increases were appliances and radios, and home furnishings – 7½ per cent and 4½ per cent respectively; furniture outlays declined by 3 per cent.

Increases among non-durable components were widespread and generally modest. Exceptions were the 8½ per cent advance in expenditures on energy sources following a 5 per cent decline in the second quarter, and the 2 per cent decline in expenditures on alcoholic beverages. The food component showed an increase of one-half of one per cent.

Most components of the services aggregate showed advances of between 1½ and 2½ per cent. Only the recreation series declined, by 1½ per cent.

Business Gross Fixed Capital Formation

Outlays on fixed capital rose from a rate of $12.6 billion to $13.0 billion, or by 3½ per cent, after allowance for seasonal factors. The bulk of this gain stemmed from increased spending on machinery and equipment as total construction activity increased only moderately in the third quarter.

The annual rate of residential construction slowed from a revised second quarter level of $2,844 million to $2,828 million. While completion edged up from an annual rate of 170,300 to 173,900 in the quarter, starts declined from 191,200 to 172,300.

Estimated outlays on non-residential construction rose from a revised $4,704 million to $4,768 million at adjusted annual rates. Although a breakdown of this figure is not available, a large part of the 1½ per cent rise appears to have been in building-type construction work.

Machinery and equipment investment rose 7½ per cent over the second quarter to a level of $5,412 million at annual rates, seasonally adjusted. This sharp upswing was reflected both in higher domestic shipments and in higher imports of machinery.

Non-farm Business Inventories

Inventory accumulation gathered momentum in the third quarter of 1968 after a slight liquidation in the first quarter and a moderate increase in the second. The accumulation of $400 million (seasonally adjusted at annual rates) was widespread, occurring at all industrial levels. It may be noted that the level of stocks does not appear unduly high in relation to output.

Value of Physical Change in Non-farm Business Inventories

(Seasonally adjusted at annual rates)

	1968		
	1 Q	2 Q	3 Q
	millions of dollars		
Manufacturing	– 132	– 276	260
Durables	– 120	– 204	204
Non-durables	– 12	– 72	56
Wholesale	24	– 56	40
Retail	284	364	140
"Other" industries	– 188	156	– 40
Grand totals	**– 12**	**188**	**400**

Substantial accumulation in manufacturers' stocks, following two quarters of liquidation, accounted for almost two thirds of the increased investment. Most of this occurred at the durable level, with the build-up in the transportation industries especially notable. Among non-durables, the overall accumulation was almost entirely attributable to the food and paper industries; most other industries experienced stock liquidation. Additions to manufacturers' stocks took place at all stages of production, but particularly in raw materials. In spite of the build-up, the stock-to-shipments ratio was well below that of the preceding quarter. Moreover, new orders increased even more than shipments, leaving a backlog of unfilled orders.

The modest increase in the stocks of wholesale traders occurred entirely in non-durables. In durables, the trend toward accumulation, which had persisted since the first quarter of 1967, gave way to a liquidation. For wholesale trade in total, the stock-to-sales ratio fell sharply this quarter.

Investment by retail traders slowed noticeably in the quarter after large accumulation in the first half of the year. All of the increase was at the non-durable level, mostly food. The stock-to-sales ratio was unchanged for the fourth consecutive quarter.

Exports and Imports of Goods and Services

With exports of goods and services dropping by over 1 per cent and imports increasing by 3 per cent, the balance on current account for the quarter swung from a surplus of $232 million at annual rates to a deficit of $480 million. The merchandise surplus dropped from $1,708 million to $1,272 million, while the non-merchandise deficit widened from $1,476 million to $1,752 million.

The deterioration in non-merchandise trade is mainly attributable to a drop in tourist and travel receipts of $48 million at annual rates, and a rise in payments of $216 million.

Exports and Imports of Goods and Services

(Seasonally adjusted, at annual rates)

	Exports			Imports		
	II Q'68	III Q'68	Percentage change	II Q'68	III Q'68	Percentage change
	millions of dollars					
Goods	13,524	13,336	– 1.4	11,816	12,064	2.1
Services	3,252	3,236	– 0.5	4,728	4,988	5.5
Gold production for export	116	108	– 6.9			
Tourist and travel	1,080	1,032	– 4.4	904	1,120	23.9
Interest and dividends	352	400	13.6	1,368	1,404	2.6
Freight and shipping	928	908	– 2.2	936	920	– 1.7
Other transactions	776	788	1.5	1,520	1,544	1.6
Totals	**16,776**	**16,572**	**– 1.2**	**16,544**	**17,052**	**3.1**

Merchandise exports fell by about 1½ per cent from the second quarter level. Declines were marked in farm and fish products; forest products; fertilizers; aircraft and parts; metals and minerals – particularly primary iron and steel, iron ore, and copper products.

Merchandise imports climbed some 2 per cent over the second quarter level. Increases were registered in industrial materials, producers' equipment, motor vehicles and parts, other transportation equipment, food and other consumer goods.

The Government Sector

Total revenues of all levels of government (excluding inter-governmental transfers) increased from $23,172 million to $24,148 million, slightly over 4 per cent. A large portion of the increase occurred in revenues from personal direct taxation which rose by over 9 per cent from the irregularly low second quarter.

Revenues from indirect taxes rose by almost $200 million with the bulk of the increase at the federal level. An increase of $136 million in corporation tax liabilities was associated with the gain in corporate profits. Investment income showed little change with a gain at the federal level being almost offset by a decline at the provincial-municipal level.

Expenditures of all governments combined rose by just under 2 per cent. Outlays on goods and services rose by $96 million due to higher federal non-defence outlays; provincial-municipal expenditures on goods and services declined slightly.

Transfer payments to persons rose by about 1 per cent in the quarter, although there were partially offsetting movements at the various levels of government. Provincial-municipal payments increased sharply, mainly reflecting payments made in Ontario under "The Residential Property Tax Reduction Act". Federal transfer payments declined with the decreases in a miscellaneous group of payments, including grants and scholarships and adult retraining payments, more than offsetting a rise in unemployment insurance payments.

With total revenues rising more rapidly than expenditures, the government sector, including the Canada and Quebec Pension Plans, moved from a deficit, on a national accounts basis and seasonally adjusted at annual rates, of $128 million in the second quarter to a surplus of $432 million in the third quarter. Most of the change came at the federal level where the deficit narrowed sharply from $908 million to $148 million; the provincial-municipal deficit widened from $216 million to $436 million. There was little change in the surpluses of the Canada and Quebec Pension Plans.

The Components of Income

Labour Income

Total labour income increased by nearly 2 per cent in the third quarter, a lesser rate than in the previous quarter. The advance in the goods-producing industries was 1 per cent, compared with 3 per cent in the second quarter, while the increase for service-producing industries was slightly over 2 per cent.

All industries in the goods-producing sector shared in the lower rate of advance. Manufacturing increased by 1½ per cent, mainly the result of higher average hourly earnings; average hours worked showed a decline, while employment increased only slightly. In construction the gain was only one half of one per cent; the effect of higher average hourly earnings was dampened by lower employment. A slight decline was recorded in the primary industries.

Among the service-producing industries, notable increases were registered in trade, 2½ per cent, and in the finance and service industries, 3 per cent. The transportation, storage and communication group advanced by about 1 per cent despite the postal strike. A small decrease was recorded in government.

Investment Income

Net corporation profits scored a second successive strong advance in the third quarter to reach a new peak of $5,940 million, sustaining the rising tempo which began after the first quarter 1967 trough. The rise in profits, which resulted partly from a drop in capital cost allowances, was over 5 per cent in the third quarter of 1968; on a gross basis, profits rose 3 per cent.

Profit improvements were general among the industry groups. Moderate increases occurred in mining, transportation storage and communication, and both wholesale and retail trade. Larger increases were registered in finance, 12 per cent; utilities, 28 per cent; and service, 26 per cent. Profits of the manufacturing group were little changed.

Within the manufacturing group, profit movements were diverse. Advances of 5 and 10 per cent were recorded in the metals and chemical industries respectively. Very moderate rises in profits were experienced in the rubber, wood, and electrical products industries. The non-metallic minerals and paper industries recorded a noticeable 19 per cent decline, while less abrupt decreases were registered in the textile, printing, and petroleum and coal industries.

Net Income of Non-farm Unincorporated Business

Net income of non-farm unincorporated business, seasonally adjusted at annual rates, rose to $3,476 million, slightly over 2 per cent higher than the previous quarter.

Retail trade accounted for just under half of this increase, while smaller gains were made in the construction and service industries.

Accrued Net Income of Farm Operators

During the third quarter, accrued net income of farm operators rose to $1,724 million, 9 per cent over the second quarter, reflecting gains in all components of income.

With the value of both grain and livestock production showing only marginal increases, the gain was almost entirely due to higher receipts from the sale of other farm products. In this category the most notable increase took place in dairy subsidy payments.

Production by Industry

The seasonally adjusted Index of Real Domestic Product rose by 1.0 per cent to a level of 145.2 from the revised second quarter level of 143.8. The service-producing industries increased by 1.2 per cent, while the advance in goods-producing industries was 0.7 per cent.

Trade accounted for almost half of the total third quarter increase. Retail trade rose by 4 per cent; almost half of this came from an acceleration in sales of motor vehicle dealers, which more than offset a drop in sales of liquor, beer and wine stores (affected by strikes in Quebec and Ontario): Wholesale trade increased by 3½ per cent.

Electric power, gas and water utilities advanced 6 per cent after a small dip in the second quarter (natural gas was affected by relatively warm weather in April).

Manufacturing industries rose by one half of 1 per cent in the third quarter, with an increase of 3 per cent in durables more than offsetting a drop of 2 per cent in non-durables. An advance in motor vehicle manufactures and a drop in the strike-affected paper and allied industries group were the most significant changes.

Construction declined 2 per cent, with falls of 1 to 8 per cent in the highways, engineering, and non-residential building components. Residential construction was almost unchanged from its second quarter level.

The transportation, storage and communication index was slightly less than it was at the end of the second quarter. It was affected by the St. Lawrence Seaway, the postal, and the grain handlers' strikes.

FIRST NINE MONTHS 1968

Introductory Review

For the first three quarters GNP was 7.6 per cent higher than in the same period of 1967, compared with a 6.8 per cent gain for the full year 1967. In volume terms, the advance was 4.4 per cent, well above the 2.8 per cent increase of the previous year.[1]

Continued buoyancy in personal expenditure and intensified demand for new housing and merchandise exports were the salient features of the expansion. Personal outlays increased by 8½ per cent, paced by vigorous demand for durables, especially for new cars. Expenditure on new residential construction jumped by 20 per cent, and more than offset a 3 per cent decline in outlays for plant and equipment. Merchandise exports rose by 19 per cent, almost twice the rate of advance of 1967; imports also increased, but less rapidly, with the result that the merchandise surplus advanced to over $1 billion. Government expenditures also contributed to total demand, but the 7 per cent increase was appreciably lower than in the previous year; particularly notable was the slowdown at the federal level.

Among components of income, net corporation profits increased by 14½ per cent following declines in both 1966 and 1967; gross profits rose by 8½ per cent after only a slight advance in the previous year. Labour income increased by 8 per cent, slightly down from the 1967 rate. Employment increased by just over 1½ per cent in the first nine months, about half as rapidly as in the previous year; the growth in the labour force also slowed, but by a lesser amount, while the unemployment rate rose to 5.0 per cent compared with 4.1 per cent for 1967.

Price Movements

In the first nine months of 1968, the price component of gross national product rose 3.1 per cent from the corresponding period of 1967 compared with a 3.9 per cent advance for the full year 1967. Significantly higher import prices — which are reflected in the components of gross national expenditure but are subtracted from the aggregate deflator — contributed to the lower price increase.

Prices of consumer goods and services rose by 3.8 per cent, a higher rate than in the previous year. Non-durable goods prices increased by 3.8 per cent, twice the rate of advance of a year ago; all items except drugs shared in the rise, with the more prominent increases occurring in tobacco, alcoholic beverages, gasoline and electricity. Food prices turned up by 3.4 per cent after only a fractional increase in 1967. The price component of both durable goods and services registered smaller increases than in 1967.

---

[1] Real Domestic Product at factor cost by industry of origin, an alternative but conceptually somewhat different measure of economic production, shows a 3.7 per cent advance for the first nine months of 1968. Among the differences between the two series are market price valuation versus factor cost, the use of national versus domestic boundaries, and the use of different weight-base periods.

Prices for gross fixed capital formation accelerated somewhat, as a lesser decline in the price of machinery and equipment offset some slowing in the indexes for construction. The price component of residential construction rose 6.9 per cent, while the non-residential price index advanced 4.4 per cent.

Export prices increased at the same rate as in 1967, 1.7 per cent, though the merchandise price index advanced more rapidly; higher prices for fabricated materials and end-products more than offset declines in the prices of wheat and alcoholic beverages.

Value, Volume and Price

(Percentage change, 9 months 1968 over 9 months 1967)

	Value	Volume	Price
Personal expenditure	8.4	4.4	3.8
Non-durable goods	6.4	2.6	3.8
Durable goods	8.9	7.1	1.7
Total goods	6.9	3.6	3.2
Of which: Food	4.9	1.4	3.4
Non-food goods	8.0	4.7	3.2
Non-food non-durables	7.7	3.5	4.0
Services, excluding NEA	7.3	2.7	4.5
Government expenditure on goods and services	6.8	1.7	5.0
Business gross fixed capital formation	1.0	- 1.8	2.8
New residential construction	20.1	12.4	6.9
New non-residential construction	—	- 4.2	4.4
New machinery and equipment	- 5.8	- 4.8	- 1.1
Exports of goods and services	13.4	11.6	1.7
Gross available supply	7.9	4.5	3.2
Imports of goods and services	9.5	6.5	2.8
Gross National Expenditure	7.6	4.4	3.1

Components of Demand

Personal Expenditure

The rate of increase for personal expenditure for the first nine months of 1968 was marginally higher than for the year 1967; however, each of the three main categories exhibited a markedly different pattern from the previous year. Outlays on durables increased at a rate nearly twice as fast as in 1967; most prominent in this result were new automobile purchases which increased at a rate about seven times as fast as in the previous year. The rate of advance in services was significantly higher than in the previous year, while that for non-durables was sharply reduced.

The following table shows the pattern of increase in personal expenditure in the first nine months of this year from the same period of 1967 compared with the change between the full years 1966 and 1967:

	1966 to 1967 percentage change	9 months 1967 to 9 months 1968 percentage change
Total non-durable goods	9.2	6.4
Food	6.0	4.9
Tobacco and alcoholic beverages	9.3	3.9
Clothing	7.3	5.2
Other	15.8	10.7
Total durable goods	4.7	8.9
Automobiles, new and used	2.9	10.5
Household durables	6.4	6.6
Other	6.5	8.7
Total all goods	8.3	6.9
Total services excluding net expenditure abroad	11.5	7.3
Total services including net expenditure abroad	8.1	10.6
Total personal expenditure	8.2	8.4

Business Gross Fixed Capital Formation

Business fixed capital formation in the first nine months of 1968 increased by 1 per cent over the same period of last year. A breakdown of the total for the same period shows new residential construction 20 per cent ahead, non-residential construction unchanged, and machinery and equipment almost 6 per cent lower.

Housing starts will reach a record total surpassing 190,000 in 1968 according to Central Mortgage and Housing Corporation December estimates. In the first nine months of the year about 15,000 more units were started than in the same period of 1967, with most of the increase occurring in urban centres of 10,000 or more. Multiple dwellings gained by 16,400 while singles dropped by about 1,500. NHA financed units dropped by about 4,400, while starts financed without NHA loans gained by 19,400.

Contracts awarded for non-residential construction in the first nine months of 1968 were reported to be 3 per cent above the same period of 1967. Increases in institutional and business awards outweighed decreases in engineering and industrial awards.

Non-farm Business Inventories

For the first 9 months of 1968, the value of physical change in non-farm business inventories was $392 million, an increase of $44 million over the same period of 1967. Nearly 80 per cent of this increase was concentrated in retail trade. Most of the accumulation was in non-durable goods.

Exports and Imports of Goods and Services

During the first nine months of the year, the deficit on current account with non-residents, on a national accounts basis, narrowed to $63 million from $520 million in the same period of the previous year. (Preliminary 1967 figures published in 1967 national accounts set the deficit at $448 million.) The improvement of $457 million came about from an increased surplus of $879 million on merchandise trade, offsetting a deterioration of $422 million in non-merchandise trade.

Exports and Imports of Goods and Services

(Nine months not seasonally adjusted)

	Exports			Imports		
	1967[p]	1967[r]	1968	1967[p]	1967[r]	1968
	millions of dollars					
Nine months of year:						
Goods	8,330	8,330	9,911	8,148	8,140	8,842
Services	2,541	2,634	2,423	3,176	3,344	3,555
Gold production for export	86	86	84			
Tourist and travel	1,136	1,136	862	717	717	827
Interest and dividends	170	184	226	774	791	905
Freight and shipping	591	619	674	632	652	690
Official contributions				148	152	104
Other transactions	549	609	576	905	1,032	1,029
Totals	**10,871**	**10,964**	**12,334**	**11,319**	**11,484**	**12,397**

[p] Preliminary published.
[r] Revised.

The main element in the larger service account deficit of $422 million was the deterioration by $384 million of the net balance on tourist and travel transactions. Receipts fell $274 million from the high level attained in 1967 while payments rose $110 million.

Largest increases in exports were recorded in metals and minerals, automotive products and forest products. In imports, notable increases occurred for motor vehicles and parts and for consumer goods. Producers' equipment purchases dropped by 3.9 per cent, in line with a lower machinery investment program.

The Government Sector

Revenues of all governments combined, excluding inter-governmental transfers, rose by 11½ per cent in the first nine months of 1968 compared with the same period last year. Total government expenditure increased by somewhat less, 10 per cent, with the result that the saving of government sector increased by $240 million.

About half of the gain in government revenues occurred in personal direct taxes. The increase was largest at the federal level and was partly associated with the imposition of a surcharge on personal incomes at the beginning of 1968. Revenues from indirect taxes also rose substantially; the gain was concentrated at the provincial-municipal level and reflected higher gasoline, sales, and property tax rates. Gains of smaller magnitude were made in the other revenue components.

Higher transfer payments to persons accounted for a major portion of the increase in total spending. The further lowering of the age limit for old age security pensions and higher unemployment insurance payments, reflecting both a change in the benefit rates and higher levels of unemployment, were mainly responsible for the increase at the federal level. At the provincial-municipal level, higher grants to hospitals and educational institutions, social assistance payments, and payments under the new Ontario "Residential Property Tax Reduction Act" accounted for most of the rise.

Spending on goods and services increased by over $600 million in the period under review. Most of the increase took place at the provincial-municipal level. Federal spending in this area rose by just over $100 million. The increase occurred in non-defence outlays and was associated with higher wage and salary payments and capital outlays; defence expenditures declined somewhat.

Federal transfer payments to the provincial and municipal governments increased by somewhat over $300 million in the first nine months of 1968. Increases in transfers under the Canada Assistance Plan, higher transfers under taxation agreements, and post-secondary education grants accounted for much of the rise.

With total federal expenditures rising more sharply than revenues, the federal government registered a higher deficit in the first nine months of 1968 than in the first nine months of 1967. At the provincial-municipal level, the deficit narrowed by over $200 million and accounted for most of the change in the surplus of the government sector.

The Components of Income

Labour Income

During the first nine months of 1968, total labour income was about 8 per cent higher than for the equivalent period of 1967. This compares with rises of 9.2 and 13.3 per cent during 1967 and 1966. Most of the advance over last year resulted from increases in average weekly earnings, principally caused by gains in average hourly earnings. The gain recorded in average weekly earnings was about the same as in 1967, and about 1 per cent more than in 1966. Employment on the other hand increased more slowly than in the two preceding years.

In the goods-producing industries, wages and salaries were 4.6 per cent higher than in the first three quarters of 1967. This compares with gains of almost 6 per cent and 13½ per cent in 1967 and 1966. Manufacturing, which was affected by labour disputes to a larger degree this year than in 1967, increased by just over 5½ per cent. Construction advanced by only 1 per cent and the primary industries rose by slightly less than 5 per cent.

Wages and salaries in the service-producing industries were about 10½ per cent greater than during the first nine months of 1967. This is slightly less than the gains recorded in the two previous years. The transportation, storage and communication industry, which was seriously affected by labour disputes, had the lowest rate of increase — 6 per cent. All other industries recorded advances of between 9 and 11½ per cent.

Investment Income

An advance of over 14 per cent was experienced in profits for the first three quarters of 1968, as compared to 1967. Movement was strongly upward in a majority of industries. Profits mounted in the mining industry, 17 per cent; manufacturing, 20 per cent; wholesale trade, 10 per cent; and finance, 27 per cent. Retail trade and utilities recorded marginal advances, while the transportation storage and communication, and service industries registered declines of 4 and 19 per cent respectively.

Most of the industries within the manufacturing group showed profit improvement. Noticeable rates of expansion were registered in the textile industry, with a 69 per cent improvement; wood, 65 per cent; metals, 20 per cent; electrical products, 49 per cent; non-metallic minerals, 61 per cent; chemicals, 23 per cent; and food and beverages, 20 per cent. Profit rise was less pronounced in the paper, and printing and publishing industries. In the petroleum and coal industry profits fell by 9 per cent, and by 8 per cent in the rubber industry.

Rent, interest and miscellaneous investment income for the first three quarters of 1968 increased by 9 per cent over the corresponding period of 1967.

Net Income of Non-farm Unincorporated Business

During the first nine months of the year, net income of non-farm unincorporated business increased nearly 7½ per cent over the corresponding period in 1967. All industries recorded gains during the period, the most significant increases occurring in construction, retail trade and service.

Accrued Net Income of Farm Operators

Over the first three quarters of 1968, accrued net income of farm operators from farming operations fell by just over 2½ per cent from the level reached a year ago. The value of grain production rose somewhat, while the value of livestock production declined. Cash income from the sale of all other farm products showed little change. Operating expenses continued to rise and contributed substantially to the decline in net income.

Net income of farm operators, which is reflected in personal income, rose 7 per cent over the previous year due to record high payments made by the Canadian Wheat Board.

LABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE AND EMPLOYMENT INCREASED IN NOVEMBER WHILE UNEMPLOYMENT DECREASED. UNEMPLOYMENT WAS 4.9 PER CENT OF THE LABOUR FORCE.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
		thousands				per cent	thousands

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 12.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. **Source: The Labour Force, (71-001) D.B.S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

Table 28: employment indexes,[1] by industrial division (1961=100), based on the 1960 standard industrial classification

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted.

[2] Total manufacturing inventory owned by manufacturers including warehouse stocks.

[3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month.

[4] Annual figures for inventories and unfilled orders are end of December values.

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D.B.S.; and Department of National Revenue.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gross new production by field less field flared and waste, Canadian sources only. [4] By gas utilities, Canadian sources only. **Sources: Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Products (45-004), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery oduction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comngled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove , kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a mparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha special-s, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1] The data are collected for 1,400 municipalities and individual figures are available on request. [2] Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S.**

---

[1] The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normall follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerabl change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up ar based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The tot value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above tabl covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Eve though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the age of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. tern grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the x are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade " hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains rterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

---

[1] Total value of retail trade seasonally adjusted includes sales of department stores, general merchandise stores, variety stores and all other stores. Due to changes in definition of department stores, the re-classification of some variety store firms and the introduction of general merchandise stores, formerly in all other stores, the unadjusted data for 1968 are not comparable with the data of previous years; general merchandise store sales were $42,730,000 in January, $44,853,000 n February, $53,768,000 in March, $59,679,000 in April, $63,110,000 in May, $58,711,000 in June, $48,856,000 in July, $62,164,000 in August, $61,683,000 n September and $74,353,000 in October 1968. **Source: Retail Trade (63-005), D. B. S.**

---

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchan- ing and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all er stores, the 1968 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 e been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and ir sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and herlands.

Source: Trade of Canada, Imports (65-007), D. B. S.

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in tl table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United Stat railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Source Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carr only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered service included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are t for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53 monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes eduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, 4 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit ough Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution ems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available rately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

[1]The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Onta Prairie provinces and British Columbia from the total. [2]In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements m under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commer Failures (61-002) Quarterly, D. B. S.** *108,631

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and vided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of ada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. luding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net rc's while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all panies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in da (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely arable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal cating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes ls storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery ind (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources:** **Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.**

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, bench mark data, etc.

Changes in this issue are as follows:

Table 57: Refrigerators, freezers, washing machines and clothes dryers.

This table has been expanded to provide information on production, sales and factory stocks of "freezers" and "clothes dryers". Historical monthly data are available on request.

Table 58: Radio and television receiving sets.

A new series, "manufacturers' sales of made-in-Canada colour television sets", has been introduced with this issue. The sales of "portable radios", which have not been published since January 1968, have been included with "home sets" radio receivers.

Table 90 and page S-8: Consumer credit.

Monthly consumer credit statistics in Table 90, unadjusted and adjusted for seasonality, and total consumer credit outstanding, page S-8, have been revised from January 1967 to date.

RECENT DEVELOPMENTS IN EMPLOYMENT AND PAYROLL STATISTICS

The Employment Section of the Labour Division of the Dominion Bureau of Statistics conducts a number of surveys of employment, earnings and related data. This article describes developments over the past several years and outlines some changes planned for the future.

I. Large Establishment Survey of Employment, Payrolls and Man-hours

In this survey approximately 40,000 commercial establishments having twenty or more employees in any month of the year report employment, earnings and hours worked for their last pay period each month. Results are published in monthly and annual publications[1] and, in summary form, in the Canadian Statistical Review.

In 1966 the survey was converted from the 1948 to the 1960 Standard Industrial Classification, and for index numbers, from 1949 to 1961 as a time base. Data retabulated on the new classification and time base were carried back to 1961 and published in "Historical Series", Catalogue No. 72-504. The 1967 annual publications to be released in the near future will include revised statistics for the years 1957 to 1960 inclusive.

To regain and improve the timeliness lost in release of information during the conversion—primarily due to problems associated with a new computer tabulation programme—an additional programme was successfully introduced in May 1967. This provides for the photographing and printing of the computer printouts in tabular form directly from the computer. A further step towards more complete automation was the introduction in that year of an automated mailing and follow-up system. Further, a revised computer imputation technique, for use when reports are outstanding, was developed and combined with a successful telephone campaign to encourage earlier reporting by large firms.

Tests of the new imputation technique revealed that reliable estimates could be obtained for the major industry divisions, given a response rate of 50 per cent. It was decided, therefore, to produce and release preliminary estimates of employment and earnings at this stage. The new "Advance Statement on Employment and Average Weekly Wages and Salaries", Catalogue No. 72-001, first released in February 1968, thus provided for the release of preliminary information four weeks in advance of regularly published data.

To satisfy the insistent demand for more industrial and geographic detail, and improved timeliness, more sophisticated imputation procedures now developed will be implemented as part of the longer-run automation programme. This programme, which is scheduled for introduction in late 1969, will automate all aspects of the survey, including the editing of completed questionnaires.

Future plans call for the eventual consolidation of data from all monthly surveys in a single publication when the large establishment survey has been fully automated. In addition, the report will include series on employment and earnings for salaried employees, and aggregates of employment for salaried employees, wage-earners and all employees together.

Selected seasonally-adjusted employment indexes have been published for some years in Employment Section monthly reports and in the Canadian Statistical Review. To overcome severe space limitations, and to make available a much wider range of seasonally-adjusted series, a new annual publication, "Seasonally Adjusted Employment Indexes", Catalogue No. 72-206, was released in May 1968. This contains some 160 series both unadjusted and adjusted for seasonality, prior (strike) adjustment factors, and final seasonal adjustment factors. There are plans for expanding the number of series which are now seasonally adjusted.

II. Surveys of Employment in Small Establishments and in Non-commercial Industries

Employment data are collected monthly from a 10 per cent sample of the 340,000 smaller commercial establishments in Canada that are not covered in the large establishment survey described above. Information from these two surveys, employment data from other special surveys in the non-commercial sector, and estimates of government employment are combined to produce "Estimates of Employees by Province and Industry", Catalogue No. 72-008.

A number of changes of interest were made during the past year in this publication. In February 1968 estimates of employees were introduced for federal and provincial governments (with the exception of the province of British Columbia) and for hospitals, education and related services. At the same time revisions were made to historic data to fully reflect the introduction of the 1960 Standard Industrial Classification.

Data are now being collected and compiled for religious and welfare organizations and estimates are being prepared for municipal government.

[1](a) "Employment and Average Weekly Wages and Salaries", Catalogue No. 72-002.

(b) "Advance Statement on Employment and Average Weekly Wages and Salaries", Catalogue No. 72-001.

(c) "Man-hours and Hourly Earnings", Catalogue No. 72-003.

(d) "Review of Employment and Average Weekly Wages and Salaries", Catalogue No. 72-201.

(e) "Review of Man-hours and Hourly Earnings", Catalogue No. 72-202.

These series will be included in the "Estimates" in 1969. The "Estimates" will ultimately provide full coverage of the entire non-agricultural sector of the economy.

As of May 1968, with the complete automation of the small establishment survey, production of employment data for the smaller establishments has been advanced by approximately twenty days. The new system has successfully automated the up-dating of the master file of establishments, the sample selection and rotation, the addressing of questionnaires and the follow-up and response control procedures.

The quality of the data produced has also been improved by (a) the use of a more sophisticated imputation technique for non-response which has the effect of maintaining the sample size, (b) the use of a finer industrial stratification in drawing the sample, and (c) the use of an improved technique for minimizing the bias caused by the accidental inclusion of large establishments in the sample. The computer system also allows for the publication of additional data; for example, information can now be made available for seven additional major industry groups.

In a larger framework, the successful development of the fully-automated system for the small establishment survey prepares the way for similar systems elsewhere in the Dominion Bureau of Statistics. It also provides ready access to a large magnetic tape file of addresses for use in surveys elsewhere in the DBS.

A reference paper describing the technical aspects of the preparation of "Estimates of Employees", and giving monthly data from 1961 on for all published series, is planned for the spring of 1969.

III. Annual Survey of Earnings and Hours in Manufacturing

Each year, in October, all larger manufacturing establishments are asked to report employment, earnings and hours separately for males and females, divided into very broad occupational groups. Resulting statistics are published in "Earnings and Hours of Work in Manufacturing", Catalogue No. 72-204.

For the first time, in October 1968, a sample survey replaced the former total coverage of all larger manufacturing establishments. A substantial improvement in timeliness of data release is anticipated. In addition, the change will alleviate the response burden for many firms. Partially offsetting these advantages, however, will be a reduction in the industrial and geographical detail available for publication.

In conjunction with the annual survey, a modified questionnaire requesting information on payrolls was mailed to a sample of small manufacturing establishments. Results of this survey will be used to assess the feasibility of producing earnings data for establishments employing fewer than twenty persons on a regular basis.

IV. Survey of Labour Costs

In January 1968, the Employment Section of Labour Division and the Economics and Research Branch of the Department of Labour undertook jointly a comprehensive survey of selected labour costs.

For many years industry, government and labour have sought information which would relate supplementary compensation of various kinds to the basic pay received by employees. This interest has been accentuated in recent years by the fact that the value of "fringe benefits" seems to be increasing in significance more rapidly than basic pay. For this reason, statistics on "straight-time" average hourly earnings may not, in fact, be accurate indicators of trends in total compensation.

Following a successful pilot survey of 150 manufacturing establishments in 1967, a full survey was carried out in 1968 based on 1967 data. The sample of 4,300 units included all manufacturing establishments with 100 or more employees and an average of 10 per cent of all other establishments. The twenty major industry groups of manufacturing in all regions of Canada were represented in the sample.

Labour costs statistics cover in-plant time and pay including overtime, holiday work, shift work premiums, etc.; time paid but not worked including paid holidays, vacations, sick leave, etc.; miscellaneous direct payments such as Christmas bonuses; payments required by law such as the Canada Pension Plan, Workmen's Compensation, Unemployment Insurance, and payments to private benefit plans. Published statistics will be expressed as percentages of gross and straight-time payrolls, and in cents per hour for in-plant and total hours paid for.

Response to the survey has been good, perhaps in part as a result of the advance notices that were distributed to all units in the sample. Problems encountered relate to the complexity of the survey and the fact that records regularly kept do not in many cases provide the details required to complete the questionnaire, such as absences on account of sickness or personal leave for salaried employees.

To establish a sound statistical base for the new series and to verify initial results, the Labour Costs Survey will cover the manufacturing division again in 1969, with data relating to the calendar year 1968.

V. Labour Income Estimates

Estimates of Labour Income made in the Employment Section are published in Catalogue No. 72-005, and in summary form in this Review. Labour income is the compensation paid to employees for services rendered. The main component, wages and salaries, includes directors' fees, bonuses, commissions, taxable allowances and benefits, and some imputed earnings (e.g., those for persons in religious orders). The other component, supplementary labour income which consists of payments made by employers for future benefits of employees, is composed of employer's contributions to employee welfare and pension funds, to the Workmen's Compensation fund, and to the Unemployment Insurance fund.

The Employment Section is in the process of revising the labour income estimates from 1951 to date. These revised data will be based on the 1960 industrial classification and establishment concept and will incorporate the most recent data available. The results of this work will be incorporated into the data comprising the revised National Accounts. In 1967, total labour income accounted for slightly more than half of the gross national product at market prices and was by far the largest component on the income side of the accounts.

The general method used in the preparation of the labour income estimates traditionally has been to establish annual data or bench marks by industry groups and to allocate these data by month. Most of the annual data are derived from sample and full coverage surveys conducted within the Dominion Bureau of Statistics, the decennial population censuses, and the Public Accounts and other publications of the federal and the provincial governments.

The payroll index derived from the employment survey of large establishments (i.e., establishments employing 20 or more employees during the last pay period of any month) has provided the main series for interpolating between census years, and for estimating current data from the latest bench mark available. It was also used to allocate labour income by month for most industry groups.

With respect to the current revision, new sources, new indicators and new test series are being used, but the same general method has been maintained. The publication "Estimates of Employees by Province and Industry" referred to above has contributed substantially to the improvement of the labour income estimates. Combined with average weekly earnings of the larger establishments, it has been used in the preparation of bench marks for some industry groups and as a projector for preliminary annual data to be used until actual survey compilations are prepared. These new indicators are also used to calculate revised labour income on a monthly basis.

At the end of 1967, the Taxation Division of the Department of National Revenue provided the Bureau of Statistics for the first time with an aggregate figure for wages and salaries for 1966 based on income tax reports of employers (T4 forms). This total is considered to be a close approximation to total wages and salaries as required for national accounting purposes and the existing estimates of labour income are being reviewed in the light of this new source of information.

The revised labour income estimates are expected to be published early in 1969 together with complete detail of the sources and methods used as well as definitions and other related information.

ABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT DECREASED IN DECEMBER. UNEMPLOYMENT WAS 4.8 PER CENT F THE LABOUR FORCE.

[1] The effect of the delay in the receipt of customs import documents has been adjusted for the period April 1966- July 1967 for total imports, total trade with United States, the United Kingdom and Other Countries.

SELECTED MONTHLY SERIES (More detail in Tables 40, 90, 98 and 108)

IN NOVEMBER UNFILLED ORDERS INCREASED FOR THE THIRD CONSECUTIVE MONTH, WHILE NEW ORDERS REMAINED STRONG SHIPMENTS DECLINED AND INVENTORIES WERE VIRTUALLY UNCHANGED.

THE VALUE OF CHEQUES CASHED ADVANCED FOLLOWING DECLINES FOR TWO MONTHS IN A ROW.

		manufacturing, all industries						
		owned inventories	shipments	new orders	unfilled orders	rail revenue freight loaded	cheques cashed in 51 clearing centres	consumer credit outstanding[1] (end of month)
		million dollars				thousand tons	million dollars

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary dence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in n-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées d other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for
thdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the
ies. [2] Includes residual error of estimate. **Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. Th estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Th labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing th seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the onth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and blic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average eekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given n Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included n non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term ntracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by nufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the lers will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

[1] Total inventories owned by manufacturers including warehouse stocks.

Source: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

Table 43: estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

months or monthly averages	shipments							unfilled orders at end of month						
	consumer goods		machinery and equipments	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipments	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

---

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipment to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural ste fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 196 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iro and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and d ributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor V icle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] Electric and other. [5] Excludes apartment type machines. [6] End of period. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crude oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gros new production by field less field flared and waste, Canadian sources only. [4] By gas utilities, Canadian sources only. **Sources: Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Products (45-004), Gas Utilities (55-002), D.B.S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are available on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S**

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tabl due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normali follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerabl change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up ar based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The tota value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above tabl covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Eve though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the erage of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. stern grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the dex are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 0 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade 3 " hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains arterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents. [2] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted. [3] Annual data are monthly averages of crop year. [4] Includes eggs for hatching. **Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D. B. S.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchansing and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all ier stores, the 1968 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and the sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

Source: Trade of Canada, Imports (65-007), D. B. S.

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in th table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United Stat railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Source Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carr only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are t for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53- monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes eduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60,000 annually prior to January, 4 and over $100,000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit ough Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution syems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available se rately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Onto Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Comme Failures (61-002) Quarterly, D. B. S.** *108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-
s of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and
ivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than
year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of
ada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities.
cluding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net s while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all anies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in da (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely arable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal ating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for " metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] S included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery indu (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources:** Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.

The **Statistical Observer** is a new magazine designed to contribute toward informing economists, statisticians, and related professionals about selected statistical and other research developments within the social sciences undertaken in DBS, in other federal departments and agencies, in provincial statistics offices, in universities, and in business and independent research organizations. Articles usually are short descriptions of new projects, new publications or other significant developments. Observer readers are directed to those responsible for these developments if they want further detail. The most significant personnel changes in federal and provincial statistics offices also are noted. The **Statistical Observer** is issued as often as new material warrants. It is a good means of keeping abreast of the most significant Canadian developments occurring in your field of work. You can have a free subscription. Write to:

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concept, composition, comparability, seasonal adjustment methods, bench mark data, etc.

Changes in this issue are as follows:

Tables 20 to 25 and page S–1: Labour force

The seasonally adjusted labour force series have been revised to reflect the incorporation of 1968 data. The revised series covering the entire period 1953 to date were published in the March 10 issue of the "Weekly Supplement" (Catalogue No. 11–004). The unadjusted data are unchanged.

Additional labour force statistics unadjusted and ajusted for seasonality are published in the third edition of "Seasonally Adjusted Labour Force Statistics" (Catalogue No. 71–201).

Table 39 and page S–10: Consumer price index

Beginning with this issue, Canada and regional city Consumer Price Indexes are published on a time reference base of 1961 equals 100, instead of the 1949 base. This arithmetic conversion will not alter the movements of consumer prices as reflected in the existing indexes, and no changes in weighting diagrams reflecting the content and relative importance of items in these indexes are being introduced at this time.

For the convenience of users requiring the Consumer Price Index for Canada on the present 1949 base, "the All-items index only" will be published monthly on both the 1961 and 1949 base, for an interim period in "Prices and Price Indexes", Catalogue No. 62–002. The index on a 1949 base will be derived by arithmetic conversion of the 1961-based index.

Historical 1961-based Consumer Price Index data can be obtained from the January 1969 issue of the monthly publication "Prices and Price Indexes" (Catalogue No. 62–002) and similar information is also available on request from the Prices Division.

Table 80: Exports of grains and livestock products

This table has been expanded to provide two supplementary series: "flaxseed" and "rapeseed". Historical data can be obtained from Agriculture Division, Dominion Bureau of Statistics, Ottawa.

Tables 91, 92 and page S–7: Export and import

Seasonally adjusted data for exports and imports by major countries are revised commencing with January 1966.

Page S–8: Rail revenue freight

The seasonally adjusted data have been revised from January 1967 to date. The unadjusted data are unchanged.

Table 108 and page S–8: Cheques cashed in clearing centres

The seasonally adjusted cheques cashed series for Canada on page S–8 and by province, major cities and type of account in Table 108 have been revised from 1967. The unadjusted data remain unchanged.

The DATABANK-MASSAGER System

---

* Miss Lennox is Chief of the General Time Series Section which has responsibility for the CANSIM operation and the data base. Dr. T. J. Vander Noot, formerly with the Economic Council of Canada, is now Associate Director General, Operations and Systems Development Branch, DBS.

INTRODUCTION TO THE CANADIAN SOCIO-ECONOMIC INFORMATION MANAGEMENT SYSTEM (CANSIM)

Introduction

The creation of a fully computerized national data base containing time series at all levels of aggregation is now a distinct possibility with development by the Dominion Bureau of Statistics of the Canadian Socio-economic Information Management System (CANSIM).

CANSIM is a long-term project, begun in 1967 and building on earlier work of the Economic Council and DBS. For a number of reasons, including costliness and the scarcity of skilled programming resources, the project is being developed in additive phases, each complete and each representing a possible terminal point. On completion of each phase there is an administrative review, a re-evaluation of the project and allocation of resources for the next phase. This phasing of development also permits continuation of the user-designer dialogue which originally underscored the value of a data bank and brought DBS into this project.

The first stage is now operational. This provides for storage and maintenance of the data base in direct access memory, and efficient and frequent handling of a large number of series. It also provides information and carries out housekeeping tasks required for the operation and administration of a service to users.

When fully developed, the system will provide machine readable data, from a large base, possibly encompassing the total output of published statistics from DBS and other data sources. Manipulative capability, to be incorporated into the system, will allow users to select a series, and any one of a variety of standard statistical techniques to be applied to that series.

As a national data base CANSIM offers the potential to increase productivity of all economic statisticians and economists, both public and private. A reduction in research costs is also forecast because the largest expense in much social research today is the preparation of data to the computer.

Bonuses within DBS will include improved timeliness, efficiency, and lower costs in publishing information. It should also make available much publishable information not presently published by conventional methods.

Acknowledgements

DBS acknowledges with gratitude the continuing support and co-operation of the Economic Council of Canada. Council staff members who were active in the project were Dr. T.J. Vander Noot, the designer of CANSIM who has recently joined DBS, Mr. Aurele Leduc and Miss Denise Roussin.

The Bank of Canada and the Department of Finance participated in the project as members of an Interdepartmental Users Group. In addition, the Bank is making available two computer programs, one a manipulative package, which may be used in conjunction with CANSIM.

Within DBS, Mr. R. Tharp and Mrs. R. Webster made a significant contribution as members of the team carrying out the system development. In the General Time Series Section, Mr. T. Tanaka, Head of the Publication and CANSIM Users' Service, and Miss Eileen Routliffe worked with a small staff in volume testing and implementation of the system. In co-operation with subject matter staffs they validated information in the data base and instituted procedures required for timely entry of current data.

Definitions

The following definitions of terms used in this article are provided to assist readers not familiar with computers and data banks: **Data** refers generally to time series, defined as observations through time which have some common characteristics, such as the number of births recorded annually in Canada. (Information from individual records such as the Census are excluded from this discussion.) **Data file** refers to a set of statistical observations transformed into machine-readable form, for example, punched cards or punched card images on magnetic tape. A **data base** is a set of related data files. A **data bank** is a system by which the data in the data base can be easily and inexpensively stored, maintained, retrieved and manipulated. Under this definition, CANSIM qualifies as a data bank. An **information management system** is a software tool for organizing, processing and presenting information. **Software** means the programs necessary to operate or use the computer. As computers grow increasingly sophisticated, of necessity the sophistication and importance of the software also increases. **Hardware** refers to the computers and related equipment. **Direct access memory** permits records to be stored sequentially or randomly and enables record retrieval without sequential searching through a file. **COBOL** stands for Common Business Oriented Language. **DATABANK** and **MASSAGER** are the names given to two computer programs for data storage, and for retrieval and manipulation of the stored data.

Description of CANSIM

General

CANSIM is a generalized information system which combines large data files with tailor-made retrieval and manipulative packages. Operation of the system and of the CANSIM Users' Service is the responsibility of the General Time Series Section of DBS.

CANSIM provides for storage of time series in a generalized format. A data entry program creates new files, updates existing files, permits revision and correction of stored data and contains a number of built-in checks to minimize errors being introduced into the base. There is also a housekeeping

system which re-sorts files, polices required updating of files, prepares directories of series included, and provides cost-accounting and other information required to operate and administer the system. Both systems are now in operation.

Development of the full retrieval system has been postponed to a future development stage in view of the priority given to the data entry and housekeeping programs.

As the retrieval system is modified and expanded the "CANSIM Users' Manual for Retrieval and Manipulation" will also be amended. Consistent with the central design criterion, however, users will be protected, that is, "what worked yesterday will continue to work today even though additional commands are available".

Plans include incorporation of a range of standard statistical routines, (such as the US Bureau of the Census' X-II Seasonal Adjustment program). This will allow users to select the series they wish, and the statistical routine they wish to have applied to the series.

The system as a whole, and the relationship of its component sub-systems, are illustrated in Figure 1. This shows that all action requests flow out of, and completed action requests flow into "originating agencies"—which the system recognizes by appropriate codes—through a central CANSIM Reception Clerk. Any federal government agency may store and maintain information of interest to them and may retrieve this or other information from the base. On the data entry side the largest user is DBS where the General Time Series Section is responsible for storing and maintaining information of general interest to government and public users. On the retrieval side, the CANSIM Users' Service in DBS submits retrieval action requests on behalf of non-government users.

The data entry sub-system is the only one which has the power to write on the base. The confidentiality passwords in the matrix record include a "data entry security word" without which it is impossible to enter or change information in a matrix. Other confidentiality passwords in the matrix record and in the series record protect information against unauthorized withdrawals. Agencies responsible for the data are notified via the housekeeping system of successful and unsuccessful retrieval requests for their confidential series, and of the passwords used.

The Structure of the Base and the Data Entry Sub-system

The heart of such a system is naturally the data base, and perhaps the most crucial design element in CANSIM is that direct access memory will be used to hold the entire data base. Each time series is entered as part of a matrix of related files arranged in hierarchical fashion as illustrated in Figure 2. The matrix arrangement exploits the interdependence usual in time series to achieve efficiency and economy in file maintenance. All series in the matrix can be updated or revised at the same time, thus reducing the most costly computer operation, the accessing of the data in the base. The matrix arrangement also makes possible a greater degree of internal verification of the data entered. For instance, in Figure 2, the 03 level entries must add to the preceding 02 level and the 02 levels must add to the 01 level. Figures 3 and 4 show a population table as it actually appears in the "Canadian Statistical Review" and in the CANSIM Directory of available series. Information concerning the data is stored on a matrix record and on series records. The matrix record includes information common to all such series such as title, source notes, confidentiality passwords and an indication as to whether or not the addition check is desired as the data is entered. In the directory example, Figure 3, "crossfoot performed" indicates that the check has been made. Information stored in the series record relates only to the specific series and includes information required for arithmetic operations by computer, for printing out tables from the base, for checks on accuracy of entries, and for policing of up-dating.

An important feature of the data entry program which provides for future development of sophisticated retrievals and manipulation of data, and for the full printing of full-scale reports from the base is inclusion of descriptive attributes on each and every data point: date of reference, date of entry, publication attributes (whether the figure is preliminary, estimated, or revised), codes for retrieving footnotes from the matrix record where required, and the security or confidentially code.

Hardware

CANSIM has been programmed for an IBM 360 System (Model 40 or larger). It is currently operational on a Model 65 at the Central Data Processing Service Bureau and will later be transferred to a Model 65 at DBS. The data base is held on a 2314 disc system which provides demountable direct access memory storage (necessary when a system operational at a service bureau must protect the confidentiality of data).

Programming Languages

Apart from a few small Assembler (machine language) sub-routines, all programming is in COBOL.

CANSIM Services: Availabilities and Costs

Early in the new fiscal year, DBS will offer machine-readable data from the CANSIM data base (initially some 7000 time series). A formal announcement will be made jointly by DBS and the Economic Council of Canada. Details of what retrievals are possible, and instructions for obtaining data, are contained in "CANSIM: Users' Manual for Retrieval and Manipulation". Four retrieval "commands" are available:

1. Retrieve on tape in MASSAGER format.
   The tape obtained using this command is compatible with and can be used as input to the DATABANK-MASSAGER programs.
2. Retrieve on tape in PUBLICATION format.
   The tape obtained using this command contains data for the series requested, plus all information necessary for publication of reports by a report generating routine.
3. Retrieve in TABLE format.
   This command produces a table for those "who wish to see what is in the data base." It is a working command of interest primarily to users in DBS and other federal agencies which store and maintain data in CANSIM.
4. Retrieve on tape/cards in RE-ENTRY format.
   This command, which provides for needs of the agencies using the **Data Entry Program**, can be used to supply data in card images on tape.

The manipulative capability is still so rudimentary as to be almost non-existant. Users who do not wish to write their own manipulative programs, may obtain the MASSAGER program at nominal cost from the Bank of Canada, Ottawa.

Retrieval Requests

Series may be selected individually from the total data base or users may purchase a **standard tape** in "MASSAGER format" which contains all series in the "Canadian Statistical Review". The **standard tape** will be expanded to 5000 series as quickly as time and resources permit.

There are no procedures for supplying machine-readable data to update tapes once they have been purchased. Users could update tapes in "MASSAGER format" by key punching the data for the DATABANK program (obtainable from the Bank of Canada), but a simpler procedure will be to purchase fresh tapes from the updated CANSIM base.

Requests received in DBS will normally be submitted for execution at the close of business each day, and completed jobs will be dispatched by the close of business on the following day whenever possible. The turnaround time in DBS, therefore, should not exceed 24 hours under normal circumstances. At this time there are no concrete plans for real-time operation and remote terminals although these are included in future goals.

Cost of Services

Individual series, retrieved to order of user, on user's tape, cost 15 cents per series per retrieval, with a minimum of $25.00.

The **standard tape** containing the 2500 series in the "Canadian Statistical Review" (to be increased to 5000), in "MASSAGER format", on user's tape, costs $100.00 per copy.

Charges have been established on the basis of quite limited evidence as to demand and will be reviewed and revised on a continuing basis. All contracts are renegotiable as of April 1, 1970.

Contents of the Data Base

CANSIM contains time series, for the most part published by DBS. The contents of the data base at April 1, 1969, are shown in Table 1.

Current information is added to the data base and is available for retrieval as soon as possible after its release by the data source. All series in the "Canadian Statistical Review" are normally available for retrieval by the 15th of the month of issue.

Expansion of the total data base will proceed as quickly as time and resources permit. The CANSIM system has been designed to be efficient and economic from 20,000 to 1.5 million series (this upper limit, imposed by currently available hardware, may disappear as new equipment is developed). Expansion could thus bring into the data base all publishable series produced in DBS as well as many produced elsewhere. Because all series in the data base are updated regularly by entry of current and revised information, the growth of the data base results in a matching growth in the current maintenance load. This is a significant factor determining the rate of growth when the maintenance is manual — that is, involving clerical preparations and key punching. The effective rate of expansion, therefore, is governed not so much by technical limitations as by the sometimes conflicting factors of time and resources and by the speed and direction of data processing automation in DBS.

For all series, historical data are in the data base from 1946 wherever possible, and from earlier years in some instances.

Responsibility for Data in the Data Base

The introduction of CANSIM does not affect in any way relationships which may exist between users of DBS statistics and the DBS divisions responsible for their production and for their quality and confidentiality.

TABLE 1. Contents of the Data Base as of February, 1969

(1) "Canadian Statistical Review" Catalogue No. 11-003
Some 2,500 series currently published in the Review are carried back to 1946 for most series. Includes also a small number of terminated series, and of series included for checking purposes only.

(2) "Prices and Price Indexes" Catalogue No. 62-002
Includes 1,800 monthly and annual series with historical data as far back as 1935 when available.

(3) "Balance of Payments" Catalogue Nos. 67-001, 67-201, 67-505
Includes 600 quarterly and annual series from Tables 1 and 2 of the "Canadian Balance of International Payments, a Compendium of Statistics from 1946".

(4) "Agriculture Farm Finance" Catalogue No. 21-511
Includes 1,100 annual series, with data for the most part from 1926 or 1947.

(5) "National Accounts, Income and Expenditure" Catalogue No. 13-001
In addition to series included in the "Canadian Statistical Review", there are 30 quarterly series available from 1947, and 600 annual series beginning in 1926.

(6) "Real Domestic Product" Catalogue No. 61-506
Includes 300 quarterly and annual volume indexes (1961 = 100), based on the 1960 S.I.C. from 1961. These are supplementary to series published in the C.S.R.

(7) "Industrial Production" Catalogue No. 61-506
Includes 160 annual volume indexes (1961 = 100) based on the 1960 S.I.C. from 1919 or earliest available year. These are supplementary to series published in the C.S.R.

Documentation Available from DBS

"CANSIM: Operational Manual for Data Entry", Catalogue No. 12-530, price $1.00. Because the system programs are proprietary and therefore not for sale, this manual will be of practical interest only to federal government agencies which store and maintain time series in the CANSIM data base. Users desiring a fuller knowledge of the codes used and the storage methodology will find this volume a useful adjunct to the "Retrieval Manual".

"CANSIM: Users' Manual for Data Retrieval and Manipulation", Catalogue No. 12-531, price $1.50. This manual gives detailed instructions on procedures for obtaining data from the CANSIM data base. The initial very rudimentary retrieval package described will be enlarged and improved; the manual will be expanded and modified accordingly. Existing "commands" will, however, continue to be supported.

The DATABANK-MASSAGER System

The DATABANK and MASSAGER programs, which accept input of data retrieved from CANSIM, were first developed by M.C. McCracken at Southern Methodist University in 1964, and later expanded at the Economic Council of Canada. In May of 1966 the Bank of Canada became the first agency other than the Council to make use of the system. During that summer and fall the National Energy Board and the Department of Finance also began using the system for maintenance and manipulation of the data necessary in their analytical operations. In late 1966 the Dominion Bureau of Statistics accepted the responsibility for the entry of data into the base. Information was stored and maintained by the DATABANK program prior to conversion to the CANSIM direct access memory storage and the Data Entry System. The two programs are now available at a nominal cost from the Bank of Canada.

The DATABANK program is designed to maintain a large number of economic time series on a **single** magnetic tape. Generally, this restricts the number of series that can be handled efficiently to about 10,000. The program allows for the addition, deletion and editing of any series. The data can also be listed, indexed and copied onto other tapes. In other words, the program performs those operations which fall into the general class of file maintenance. The system is designed to work with **any** data which is arranged **or** arrangeable in a time series format.

The companion MASSAGER program, which carries out the statistical manipulations of the data allocates computer memory and informs the user of the available amount of memory, accepts input from the DATABANK tape, from the CANSIM tape "in MASSAGER format" or from cards, and performs the user specified data manipulations.

Retrieved series are arrayed as columns in core storage and by a sequence of "commands" the columns are manipulated as desired. The commands include simple operations on a single series (column) such as square roots, logarithms, etc., and complex operations on several variables or columns such as multiple regressions, plots, etc. A partial list of operators is given in Table 2.

INDUSTRIAL PRODUCTION (More detail in Table 16)

THE INDEX OF INDUSTRIAL PRODUCTION ROSE BY 0.5 PERCENT IN DECEMBER. BOTH MANUFACTURING AND UTILITIES CONTRIBUTED TO THE INCREASE, WHILE MINING DECREASED. WITHIN MANUFACTURING THE DECLINE IN DURABLES WAS MORE THAN OFFSET BY AN INCREASE IN NON-DURABLES.

	total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)	
		total	durables	non-durables	mines (incl. milling), quarries & oil wells	electric power, gas & water utilities

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary e lence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census o anada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in n specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées or other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for ithdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the eries. [2] Includes residual error of estimate. **Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing th seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment c the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such a those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are nc shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes als publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the nth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and blic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average ekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given n Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included n non-durable manufacturing. [4] Except machinery and transportation equipment industries.

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 pe cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** **Source: Prices and Price Indexes (62-002), D.B.S.**

Table 40: total inventories, shipments and orders in manufacturing based on the 1960 standard industrial classification (million dollars)

monthly averages or months	shipments[1]	new orders received during month[3]	unfilled orders at end of month[4]	inventory at end of month						ratio of inventories owned to shipments
						all inventory held				
				owned[2]	held but not owned	total	raw materials	goods in process	finished products

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

Table 42: manufacturing inventories[1] by industry based on the 1960 standard industrial classification (million dollars)

end of year or month	total inventories owned	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill nipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian ulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipment to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural stee fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 196 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iro and Steel (41-001), D. B. S.**

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery oduction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove l, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a mparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialies, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tab due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations norma follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considera change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage nside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan reas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The reainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1]The estimates for the current year are subject to revision since the factors used in the blow-up a based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2]Excluding trucks. [3]The tot value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above tab covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Ev though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S**

[1] Annual data are monthly averages of crop year. [2] Overseas clearances plus U.S. imports as reported by the Board of Grain Commissioners. [3] Includes adjusted Customs exports of seed wheat. [4] Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data show for the last three months are not so adjusted. [5] Canadian Customs returns adjusted to remove effect of time lag. [6] Overseas Clearances as reported by the Board o Grain Commissioners, except U.S. imports based on Canadian Customs data. [7] Includes eggs for hatching. **Sources: Coarse Grains Quarterly (22-001), Whea Review (22-005) and Trade of Canada, Exports (65-004), D. B. S.**

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted
[2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Include stocks held by manufacturers, wholesalers and other warehouses. [4] Includes baking and frying oils and fats. [5] Includes stocks held by manufacturers and othe warehouses. [6] Includes beef stews and boiled dinners. [7] Includes fresh sausage, frankfurters, weiners and all other sausage. [8] Includes solid, coated, bulk packages and novelties. [9] Includes tomato sauce, sauces for meat and fish and sauces, other. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006)** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthl Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. [1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all ther stores, the 1968 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1]Conditional agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2]Companies licensed under the Small s Act and affiliated compagnies engaged in making personal loans. [3]Cash loans with no conditional sales contract but usually repaid in instalments. [4]Personal other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5]Loans other than secured loans and mortgage loans. res for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7]Sum of instalment credit of clothing, hardware and jewellery s, fuel dealers and "all other trades" in Table 89. [8]Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and al stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9]Amount owing to oil companies ex commercial accounts. [10]Excludes age loans; data available yearly only. [11]The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is nt; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 e been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and ir sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and herlands.

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being culated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), . (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.2), March (851.8), April (944.5), May (1,053.8), June (977.4) and July (915.5).

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in th table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United Stat railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes eduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit ugh Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because urvey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution sy ns. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available se ately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Onta Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Comme Failures (61-002) Quarterly, D. B. S.** *108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- es of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and divided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than e year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of nada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ncluding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net s while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all anies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in da (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely arable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal ating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for " metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] S included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery indu (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources:** **Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.**

PRICE MOVEMENTS IN CANADA 1939-68

J.D. Randall*

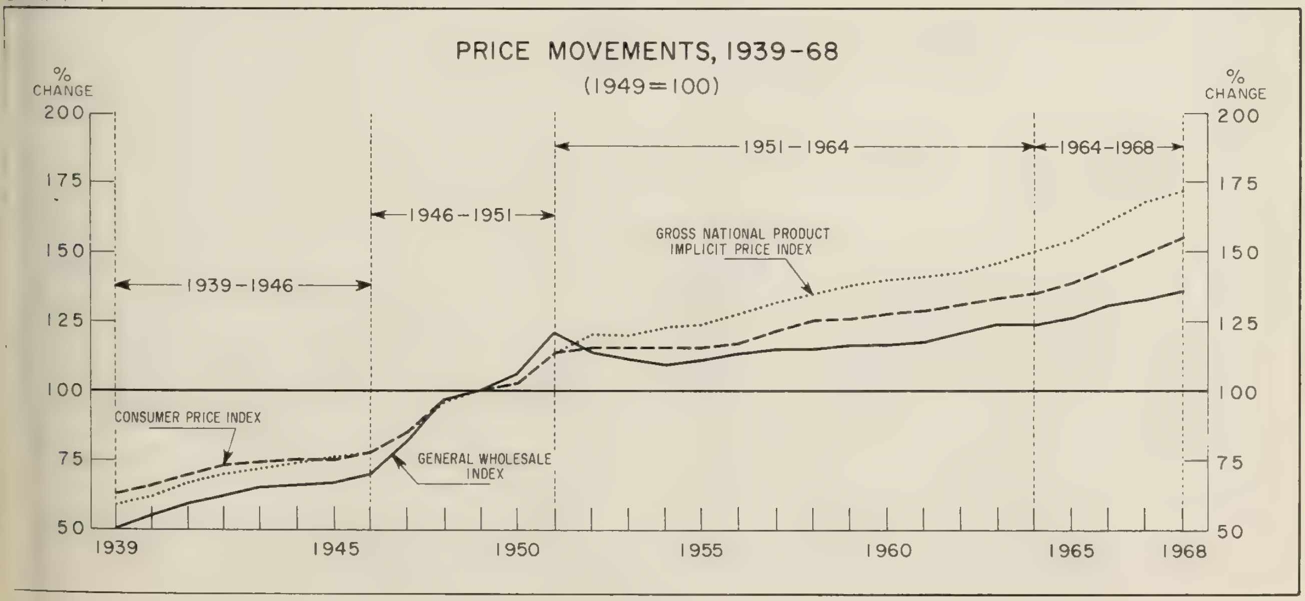
This article examines and gives some perspective to price movements over the period commencing in 1939. Three broad indicators of prices are used to trace movements from 1939 to 1968, the General Wholesale Index (GWI), Consumer Price Index (CPI) and the implicit price index of expenditure on Gross National Product (GNP). In the final years of the period some reference is made to movements in the Industry Selling Price Indexes (ISPI). Because of the intensive scrutiny already accorded to the years covering World War II and its immediate aftermath, the Korean conflict, the resource-centred capital investment boom of the mid-fifties, and the earlier years of the present expansion in economic activity, only a sketch of price movements in the period 1939 to 1964 is given. The period 1965 to 1968 has been brought into sharper focus both because of the vigour of upward price pressures in this period and the interest in the anatomy of the broader price movements. References to both individual commodity and industry price change are contained throughout this later period but more particularly in 1968.

In the period between the outbreak of World War II and 1968, underlying price movements have been upward. The trend lines in the three principal measures of overall price movements have been sharply inclined but have exhibited varying rates of increase during the period. The sharpest increase was recorded in the implicit price index, derived from the national accounts, which rose by 192 per cent, while the consumer price index in contrast rose by 146 per cent. The movement of the wholesale price index fell mid-way between the other two with a 173 per cent increase. All three measures leave little doubt that the degree of price rise over this period in total was severe. Over the same period, comparable indexes in the United States rose by the following amounts, the Gross National Product implicit price index by 181 per cent, the Consumer Price Index by 150 per cent and the Wholesale Price Index by 157 per cent. The movements in total were similar, measured both by the implicit index for GNP and the consumer index; differences between the wholesale indexes reflect in part the greater importance in the Canadian index of primary products whose price movements have tended to be more sharply inclined than industrial products.

The average annual rates of increase over the 1939-68 period for the Canadian indexes were between 3 and 4 per cent, which, because of the unusual events of the earlier time periods, are considerably above the price stability goals envisaged by the Economic Council of Canada; their goals saw price increases contained within the limits of the movements experienced between 1953 and 1963, with an upper limit of about 2 per cent.

Comparisons of this sort are considerably influenced by the base period from which the indexes are calculated, and it must be remembered that the percentages given above reflect to some extent the relatively low prices prevailing immediately prior to the war. If either 1920 or 1926 had been selected as the base, the degree of price rise recorded would have been less severe, for these were years of high prices compared with 1939 when the economy and prices reflected the impact of the depression years. In the case of both the CPI and GWI the price levels of 1926 were not reached again in fact until about the end of the Second World War.

CHART — I



---

* Mr. Randall is Assistant Director of the Prices Division, DBS.

Price Movements 1939 - 68

	General Wholesale Index	Consumer Price Index	Gross National Product Implicit Index
	Percentage change		
1939 - 68	**173**	**146**	**192**
1939 - 46	40	24	32
1946 - 51	73	46	46
1951 - 64	2	18	32
1964 - 68	10	15	15[1]
	Annual rates of change		
1939 - 68	**3.5**	**3.2**	**3.8**
1939 - 46	5.0	3.1	4.1
1946 - 51	11.5	7.9	7.9
1951 - 64	0.2	1.3	2.1
1964 - 68	2.5	3.5	3.5[1]

[1] Index for 1968 based on first nine months.

1939 - 51

Considering the pressures on the economy during 1939 - 46, price controls effectively restrained increases to annual rates of between 3 and 5 per cent in the broad measures; it was of course partly the release of artificially pent-up demands and the removal of price controls following the War, plus the superimposing of wartime demands again in 1950, which led to dramatic annual increases averaging between 8 and 12 per cent over the entire five-year period 1946 - 51. The above table highlights the difference among the various measures of price movement, but more important, it illustrates the upward surge of prices occurring in the relatively short time span immediately following the War and ending during the Korean conflict. The erosion of the value of the dollar in this single period, particularly for the commodities included in the GWI, was most marked. Despite some moderating influence in 1950 - 51, afforded by the increase in the value of the Canadian dollar on prices of imports and some commodity sales abroad for which prices are set in world markets, commodity price increases during this period were severe and were felt throughout the economy. Such increases as 38 per cent in tin prices, 33 per cent in rubber and products, 29 per cent in raw wool imported and 25 per cent in fresh meat were recorded between 1950 and 1951. These sorts of increases were reflected in a more than 10 per cent increase in the consumer price index in the same period.

1951 - 64

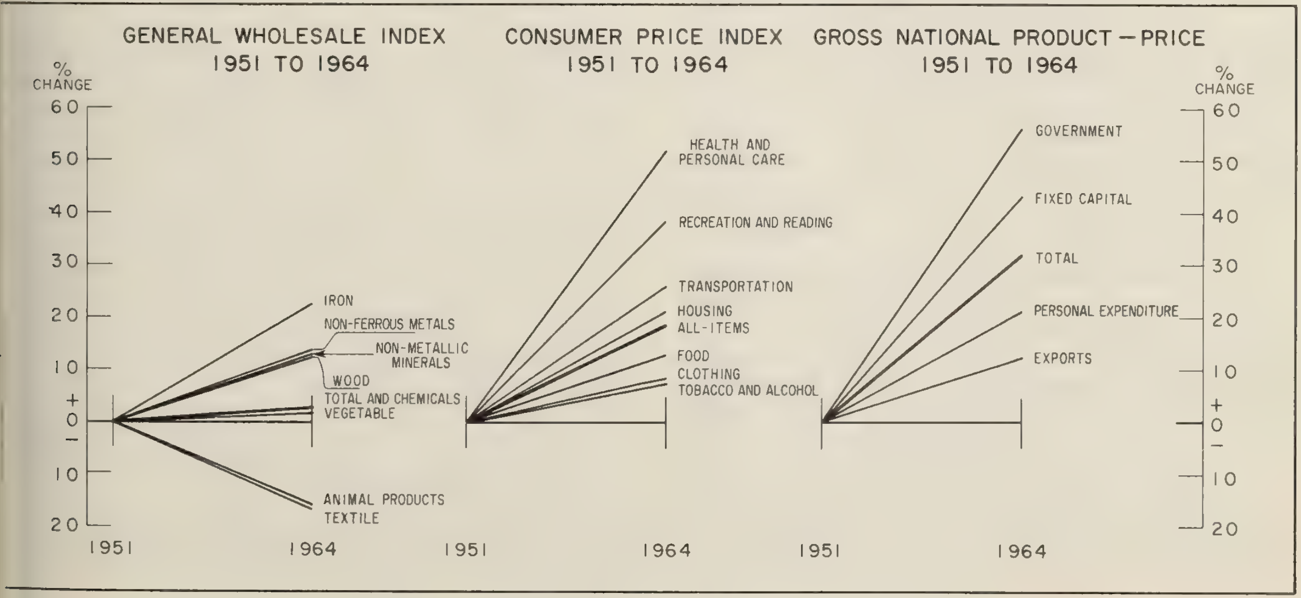
The period 1951 - 64 is of particular interest for despite the span of years, which is far greater than any of the other periods, the overall price rise was much smaller. The period is one of diversity between the three price measures and is interesting because it contains a number of significant economic events all having a direct impact on prices. These included the conclusion of the Korean conflict, the capital investment boom in the mid-fifties, and the decline in the exchange rate in the early sixties followed by a return to a fixed exchange rate in 1962, the effects of which are sufficiently well known that they require no elaboration. Although these events affected the various indexes differently, judged both by standards of the immediately preceding and subsequent periods, all indexes indicated a period of relatively stable prices. The recorded wholesale price index total gain of 2 per cent over the thirteen-year period is indeed remarkable.

The principal reason for the divergent rates o increase portrayed by the indexes can be found in their varying contents. The General Wholesale Index because of its commodity content tends to emphasize the impact of primary and partly manufactured goods. The rate of increase from 1951 to 1964 is dampened by the very high 1951 level of prices for animal products, fibres, textiles and products groups which fell dramatically at the conclusion of the Korean war and remained 16 per cent lower in price even as late as 1964. These declines combined with the relative stability of vegetable products, rubber and tobacco, chemical and allied products, offset rises in more highly processed products. The increases which were as high as 22 per cent for iron and steel products, more closely reflected the sort of price pressures apparent in the other overall indexes.

The increase of 18.5 per cent in the CPI over the thirteen-year period 1951-64 was, by all standards, a moderate rate of price increase, but the total index concealed considerable price dispersion among the main components. Food, tobacco and alcohol, and clothing, which account for close to half of the index weights showed increases lower than the total, reflecting the general weakness of prices in the vegetable, fibres and textiles, and animal products groups of the Wholesale index. Food increased by 13 per cent, clothing by 8 per cent, tobacco and alcohol by 7 per cent. The sharpest increases occurred in the service-oriented components which were not reflected in the GWI; although estimated to account for only 7 and 5 per cent of 1957 consumer expenditures respectively, health and personal care rose by 51 per cent and recreation and reading by 38 per cent. The housing and transportation groups rose more in line with the total index, but they contained a mixture of sharp increases in service components and stability in household and transportation durable equipment. The rise in the CPI, in contrast to the GWI, reflected increased prices in all major groups.

The GNP implicit price index which showed the greatest degree of inflation, rising by 32 per cent over the period, probably has a greater content of services than either of the other overall price measures. Despite the sharper price movement in this index at the total level, considerable consistency existed between measures of price increases as they affected consumers; the personal expenditure component of gross national expenditure rose by 21 per cent, an increase similar in size to the rise in the CPI, despite some conceptual differences in both the groups and the items covered. The overall index increase of 32 per cent is heavily weighted by those price changes occurring in the personal sector, accounting as they do for around two thirds of GNP. The strongest price movements in the GNP were recorded in the government and capital expenditure components, equalling in size those noted above as occurring in the health, personal care, recreation and reading components of the CPI. Prices of government purchases rose 56 per cent over the period and capital purchases by 43 per cent. Both these components are judged to somewhat overstate price rises due to the present techniques of price measurement in these areas; failure to allow for productivity changes results in an overstatement of price change which may be of significance over longer time periods. (The Economic Council of Canada in attempting to quantify the problem, suggested possible orders of magnitude for the upward bias in each of the price indexes for construction and government of 0.2 per cent per year.) The GNE implicit price index has the single advantage that it is the most comprehensive of all the price change measures available for assessing price pressures, but it must be recognized that it is not a conceptually pure measure of price change; the index is currently weighted and movements may be influenced by changes in the relative importance of the value of components.

CHART — 2

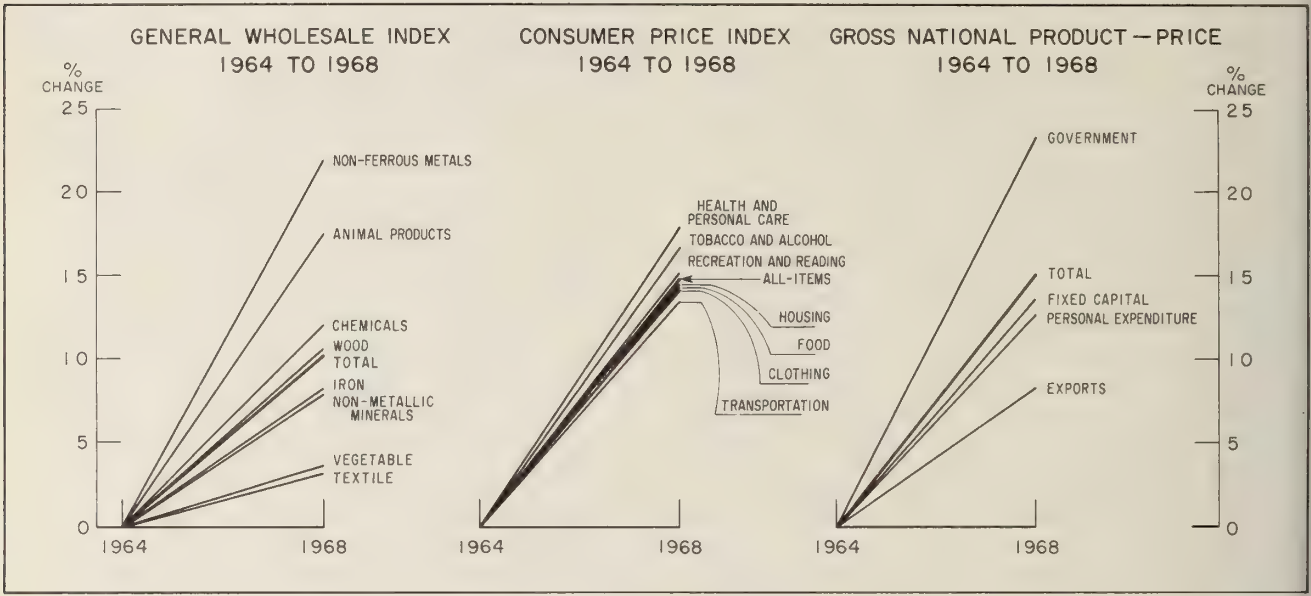


1964-68

The period from 1964 forward appears in sharp contrast to the previous period, and over the four-year stretch the renewed vigour of the rise in price levels demonstrated considerable market pressures. The GWI rose by 10 per cent as opposed to 2 per cent over the previous thirteen years, while the CPI price increase over the period totalled almost 15 per cent, not far short of the 18 per cent for the entire previous period. Price movements reflected in the implicit price index of GNP behaved similarly to the other indicators and the overall index advanced 15 per cent. The average annual rates of increase of between 2.5 and 3.5 per cent were much sharper for all measures than in the previous period although it should be noted they were not very different in the case of the CPI and GNP implicit index from the rates applicable to the whole period 1939-68.

Not only did the tempo of price change gather speed, but the anatomy of the price changes within the three measures changed.

CHART—3



Although the scale in the above chart is double that of the chart covering the previous period, three features stand out. First, price increases measured at the total level by all three indexes indicate greater uniformity than in prior periods, the aggregates for all indexes fall within five percentage points, between +10 and +15 per cent. Secondly, the comparability in size of the price rises in the CPI and personal expenditure component of the GNE is again maintained. Thirdly, in contrast to the earlier period, increases in some of the broad groupings of material and commodity prices have equalled those in the service-oriented groupings.

Price increases indicated in the chart above occurred after the current economic expansion commencing early in 1961 had been underway for more than three years and much of the slack in the economy had been taken up. Real GNP, valued in constant 1957 prices, rose by 21 per cent from the end of 1964 to the third quarter 1968, a slightly slower growth rate than that experienced in the first half of the period 1961-64. In the same period money outlays on production rose by 39 per cent and prices by about fifteen per cent. Demand increases between 1965 and the present slackened in the middle months of 1967 but soon recovered, and indications in the closing months of 1968 pointed to some acceleration in output increases in the final quarter of the year.

During the two periods of the present economic expansion, 1961-64 and 1965-68, two elements which in certain situations are related to price movements, behaved quite differently. Profits moved on a steady upward trend from the beginning of 1961 to the end of 1964, during which time they advanced by more than 70 per cent, while from 1964 to the latest available figures, they levelled off and remained little changed until 1968 when, despite fairly sharp increases in the 2nd and 3rd quarter, they ended the period only 17 per cent higher. In contrast, the rate of increase in the total wage bill accelerated, increasing by about one third in the first half of the expansion but by 45 per cent between the end of 1964 and the latest data. Allowing for higher levels of employment and the changing work week, figures of average hourly earnings in manufacturing suggest a sharply accelerated rate of increase in earnings over that prevailing in the first half of the expansion and an upward shift in unit labour costs between the two periods.

The following paragraphs take a brief look at some of the more important detail behind recent price increases and relate movements occurring at different levels of pricing.

The sharpest price increases in the GWI occurred early in 1965 in livestock products, reaching a peak in February 1966; slaughtering and meat packing industry selling prices rose almost 23 per cent during 1965 with lesser increases in the butter, cheese and milk products industry; the declining trend which followed was only reversed in May of this year and earlier price levels were not reached again until the final month of 1968. These latter month price movements were associated with rises in both egg and meat prices. Animal product price gains were reinforced by rapidly increasing vegetable product prices in the period from the end of 1965 to mid-1967. During the final months of 1968 prices of vegetable products moved up again sharply as sugar, tea, coffee and cocoa prices rose. The increases in many basic foodstuffs were reflected with some lag in the food component of the CPI, which rose at a faster rate than all other CPI groups from April 1965 through till August 1966. Moderate price declines in the latter part of 1966 and first half of 1967 were followed by a resumption of the upward trend which carried food prices up by 6.5 per cent in the past eighteen months; a noticeable acceleration in increases occurred in the second half of 1968.

Increased clothing prices in the CPI amounting to almost 15 per cent from the end of 1964 to 1968 were closely matched by industry selling prices in the men's clothing industry and the hats and caps industry. (Coverage in the broad category of clothing and knitting mills industries is at present severely limited by practical pricing problems.) Prices of natural fibres and products showed less movement, a steady upward drift raised prices by less than 5 per cent over the entire four-year period. Industry selling prices in the cotton and woollen yarn and cloth mills confirmed this sluggishness in prices. The lack of strong upward price movements may reflect a combination of import competition and competition from the growing range of man-made fibres. During 1968 some offsets occurred in fibre prices as imported raw wool prices rose and raw cotton prices fell as a result of the good 1968 crop in the U.S.A.

Very sharp increases in tobacco and alcohol prices reflected in the CPI, lifted price levels by some 9.5 per cent in the five-month period from November 1967 to the spring of 1968 were, in large part, attributable to the imposition of higher taxes on both groups, and prices at the producers' level over the same period rose much less, the largest increase being 5.5 per cent in brewery industry products. Unmanufactured tobacco prices advanced by about 3 per cent during 1968.

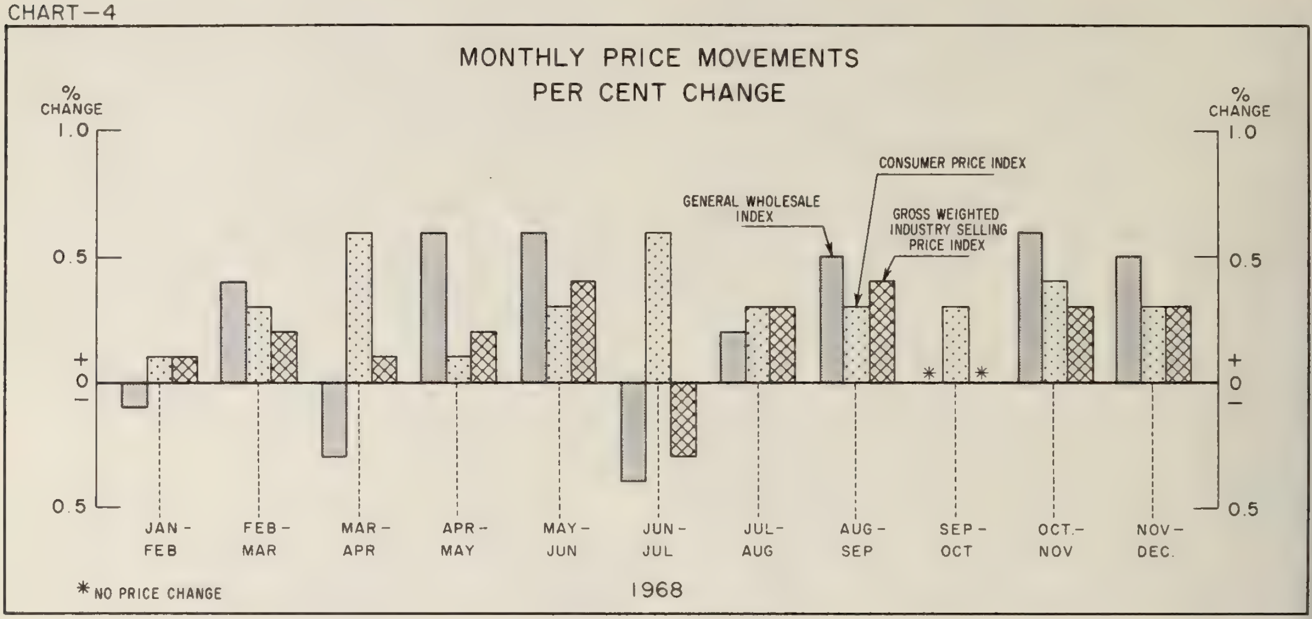
Prices of both wood products and non-ferrous metals have provided a significant upward push to the general movement of prices since 1964. After little change in 1965, wood product prices rose at an increasing rate through 1966-68, gaining 7.5 per cent in the last twelve months as exports of lumber surged to new high levels, and demands for domestic residential construction rose. Advances in selling prices of lumber mill and shingle mill products were particularly marked. Other building material prices such as roofing material, cement and paint were marked-up during 1968. Pulp and paper mill prices were soft during 1968 with declines in pulp prices in the face of competition and surplus capacity in the industry. Non-ferrous metal prices rose erratically from the beginning of the period to a peak about 22 per cent higher in June 1968. The sharp movement occurred in four step-like progressions, with the largest occurring in 1967 as the prices of silver, copper and nickel all rose substantially, representing both speculative purchasing particularly in relation to silver, and supply shortages of copper as labour disputes tied up production in the U.S.A. Some of the pressures subsided in 1968 and declining prices of silver, copper and zinc caused the index to drop back by almost 6 per cent in the last half of the year.

Price changes in the iron and steel industries moderated the general increase over the period, and increases of only 5 and 8 per cent respectively were recorded in the important steel ingots and castings, and rolled iron and steel categories during the four year span. In the past year, iron and steel prices generally have been stable in the face of heavy buying pressures. Such industrial equipment as heavy electrical equipment and wire and cable showed declining prices in 1968. Little change occurred in the prices of new passenger cars at both the manufacturers' and dealers' level between the end of 1967 and December 1968. In both cases adjustments are made to remove price change associated with quality change.

The relative pace of price increases experienced in the goods and services components of the CPI has shifted noticeably between the immediate past period (1964-68) and the previous period (1951-64). From December 1964 to 1968, commodity prices in the CPI rose by 13 per cent and services by 19 per cent, whereas in the period December 1951 to December 1964 commodities rose by only 6.5 per cent in contrast to a more than 42 per cent increase in services.

The following chart of monthly price movements in 1968 and the figures of price movements in the base weighted index of GNE of +0.9, +1.0 and +1.0 for the first three quarters of 1968 respectively, give no clear indication of the future direction of price movement. CPI prices have moved consistently upward through the year and at a remarkably smooth rate in the final five months of the year, whereas the GWI and the gross weighted index of manufacturers selling prices (ISPI) have been more volatile and have, in the final half of the year, moved closely together. Industrial and primary product price movements, if anything, appear to have gathered some upward momentum in the final months of the year compared with the earlier months when offsetting price declines occurred. This firming tendency is perhaps more apparent in considering the details of the ISPI than from a comparison of the major indexes. Decreases occurred in only 6 industry indexes in November and only 10 in December out of a total of just over 100 industry indexes; these declines represent a very low proportion of the total in relation to past experience.

CHART—4



REAL DOMESTIC PRODUCT,[1] FOURTH QUARTER AND THE YEAR, 1968

Fourth Quarter 1968

Real Domestic Product, seasonally adjusted, advanced by 2.0 per cent to a level of 148.6 from the revised third-quarter level of 145.7. This advance, which was the largest since the first quarter of 1966, followed increases of 1.2, 1.4 and 1.0 per cent, respectively, in the first three quarters of this year. The goods-producing industries, with an increase of 3.0 per cent, were responsible for over 70 per cent of the increase in RDP.

Manufacturing accounted for nearly one half of the total fourth-quarter advance. Its gain in this quarter, the majority of which came from non-durables, was larger than any since the third quarter of 1961. For the first time in many years every one of the major groups in non-durables rose, but by far the most significant was an increase in paper and allied industries. The most significant change in durables was a large increase in sawmills and planing mills, affected by greater exports of lumber to the U.S.

Between them the transportation, storage and communication and the agriculture divisions were responsible for close to one third of the total fourth-quarter advance. The most significant changes in the former division were a large increase in water transportation in the latter part of the fourth quarter and a large increase in railway transportation (particularly of agricultural products) in the earlier part of the quarter. A substantial increase in the production of livestock was the main reason for the advance in agricultural output.

The Year 1968

In 1968 Real Domestic Product rose by 4.2 per cent. This compares with the 1946-67 growth rate of 4.7 per cent, the 1961-67 rate of 5.9 per cent, and the 1967 rate of 2.7 per cent. Growth rates for the major divisions of the economy are shown in the following table.

---

[1] It should be noted that the movements shown here may not always coincide with the constant price gross national expenditure data in the quarterly national income and expenditure accounts, due to conceptual and statistical differences. Among these differences are factor cost versus market price valuation, the use of domestic versus national boundaries, and the use of different weight-base periods.

Real Domestic Product Industry, Annual Growth Rates

	1946-67	1961-67	1967/66	1968/67
Real domestic product	4.7	5.9	2.7	4.2
Real domestic product less agriculture	5.0	6.0	3.6	4.2
Goods-producing industries	5.0	7.0	0.0	5.0
Goods-producing industries less agriculture	5.8	7.4	1.7	5.0
Service-producing industries	4.4	5.0	5.0	3.6
Agriculture	1.7	3.5	- 14.2	5.3
Forestry	2.3	4.4	4.1	2.2
Fishing and trapping	1.1	0.3	- 7.8	14.6
Mines (incl. milling), quarries and oil wells	8.7	6.7	6.4	5.2
Manufacturing	5.1	7.6	0.3	4.5
Non-durables	4.9	5.8	1.3	4.6
Durables	5.3	9.7	0.6	4.6
Electric power, gas and water utilities	9.3	8.4	9.1	8.1
Construction	6.2	7.0	0.5	5.5
Transportation, storage and communication	4.7	6.6	5.8	3.8
Transportation	4.3	7.0	5.9	3.5
Storage	5.5	3.4	- 0.5	- 4.7
Communication	6.4	5.7	6.5	5.6
Trade	4.6	5.3	4.2	3.5
Wholesale	4.9	5.3	3.5	3.2
Retail	4.4	5.3	4.7	3.7
Finance, insurance and real estate	..	3.9	4.4	4.1
Community, business and personal service	4.2	5.8	4.8	3.2
Public administration and defence	..	2.2	6.9	3.6

Several major factors affected industrial output in 1968. The major positive effect was the record increase in exports, paced by shipments under the Canadian-U.S. auto pact. Other positive factors were the growths in population and employment. Inhibiting the growth in the economy was the fact that the time lost in strikes and lockouts was one-third greater than it was in 1967. Major strikes occurred in the water transportation, storage, post office, retail trade (liquor), and the motor vehicle, wood, machinery, and rubber manufacturing industries. Another factor affecting 1968 output was the absence of the growth effects of EXPO and other centennial celebrations.

Although the increase in the output of the domestic economy was widespread, the largest contribution came from the manufacturing division. Durables and non-durables shared almost equally in the contribution (nearly 30 per cent), with foods and beverages, paper, textiles and chemicals recording the most important growth in non-durables, and transportation equipment and primary metal industries the most significant gains in durables.

Both finance, insurance and real estate and the community, business and personal service industries contributed 10 per cent each to the increase in total Real Domestic Product. Continued gains in education and health and welfare services were the most significant changes in the latter group of industries.

Trade made almost the same contribution as the above two groups of industries. Two thirds of this came from retail trade, with sales of department stores and motor vehicle dealers registering the most important increases.

Transportation, storage and communication rose in 1968 despite the effect of several strikes and the post-EXPO effect on passenger transportation. Construction also rose, because of residential construction; the reported number of starts on dwelling units was more than 32,000 greater than the previous record in 1965.

Other factors that occurred in 1968 which affected the output of specific industries were the abnormally cold weather in both January and December, a decline in the number of employees in defence services, the very low quality wheat crop, and widespread minor strikes (especially in manufacturing). The industry with the largest percentage change in 1968 was fishing and trapping, with both Atlantic and Pacific fishing recording substantial increases.

LABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE, EMPLOYMENT AND UNEMPLOYMENT INCREASED MODERATELY IN FEBRUARY. UNEMPLOYMENT REMAINED 4.3 PER CENT OF THE LABOUR FORCE.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
	thousands				per cent	thousands

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary idence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census Canada, 1961, Catalogue Number 12-506. [2]Includes logging, fishing, trapping and hunting. [3]Includes mechanical and construction. [4]Includes a small number in n-specified occupations. [5]Does not include students entering Canada on students' visas. [6]Includes also retired persons, elderly dependents, fiancés or fiancées d other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 14.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2]Canada totals, obtained by summing seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are no shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes als publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

Table 28: employment indexes,[1] by industrial division (1961=100), based on the 1960 standard industrial classification

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the nth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]Excludes agriculture, fishing, trapping and blic administration and defence. [3]Includes storage, electric power, gas and water utilities. [4]Excludes domestic service. **Source: Employment and Average ekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term ontracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by anufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the ders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

urce: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term ontracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in onufacturing Industries (31-001), D.B.S.**

[1] Total inventories owned by manufacturers including warehouse stocks.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001),
D.B.S.

Table 43: estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1960 standard industrial classification (million dollars)

months or monthly averages	shipments							unfilled orders at end of month						
	consumer goods		machinery and equipment	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products	consumer goods		machinery and equipments	construction materials and components	other intermediate goods and supplies	export-based industries	supplementary classification: automotive products

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and stributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor hicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

---

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monaural and stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets include all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), D.B.S.**

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics, (57-001), D. B. S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1] Includes crud oil, condensate and pentanes plus. [2] Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3] Gros new production by field less field flared and waste. [4] By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Products (45-004), Gas Utilities (55-002), D. B. S.**

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are available on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D. B. S**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tabl due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normal follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerab change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

---

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are col- ected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of otal Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board 36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), ales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade f Canada, Imports (65-007), Exports (65-004), D. Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up ar based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The tota value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above tabl covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Eve though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the ərage of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. stern grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the ex are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of) lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade " hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains ərterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.

---

[1] Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last current year are not so adjusted [2] Production is calculated as the sum of the current manufacturers' shipments and the net change in manufacturers' inventories from the previous months. [3] Include stocks held by manufacturers, wholesalers and other warehouses. [4] Includes baking and frying oils and fats. [5] Includes stocks held by manufacturers and othe warehouses. [6] Includes beef stews and boiled dinners. [7] Includes fresh sausage, frankfurters, weiners and all other sausage. [8] Includes solid, coated, bulk packages and novelties. [9] Includes tomato sauce, sauces for meat and fish and sauces, other. **Sources: Grain Milling Statistics (32-003), Oils and Fats (32-006)** Quarterly Reports, **Biscuits and Confectionery (32-016), Fruit and Vegetable Preparations (32-017) and Miscellaneous Food Preparations (32-018), Monthl Production of Soft Drinks (32-001),** Monthly Report, **Meat and Meat Preparations, D. [1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all ther stores, the 1968 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 ve been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and eir sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and therlands.

Source: Trade of Canada, Imports (65-007), D. B. S.

---

[1] The trade figures have been adjusted to reflect more closely the timing of transactions, and to exclude commodities which are covered elsewhere or are not pertinent for balance of payments purposes. [2] Includes government transactions, n. o. p., personal and institutional remittances, miscellaneous income, insurance transactions and business services.

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in thi table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United State railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carri only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are to for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-0 monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes eduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, 4 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit ough Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution syems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available se rately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ont Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Comme Failures (61-002) Quarterly, D. B. S.** *108,631

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver- s of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and ivided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of ada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. cluding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes also storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for " metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] S included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery indu (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources:** **Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.**

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concepts, composition, comparability, seasonal adjustment methods, benchmark data, etc.

Changes in this issue are as follows:

Table 37 and page S-10: General Wholesale Price Indexes

General Wholesale Price Indexes have been revised for 1968.

Table 51: Primary Textiles

With this issue Table 51 has been completely revised and brought up to date. Changes include the addition of new series and presentation of data at Canada level.

Figures for prior years are under compilation.

Table 85 and page S-5: Retail Trade

Seasonally adjusted data for Retail Trade by store type have been revised for the year 1968. The unadjusted data remain unchanged.

S-6 and S-9 pages: New Residential Construction

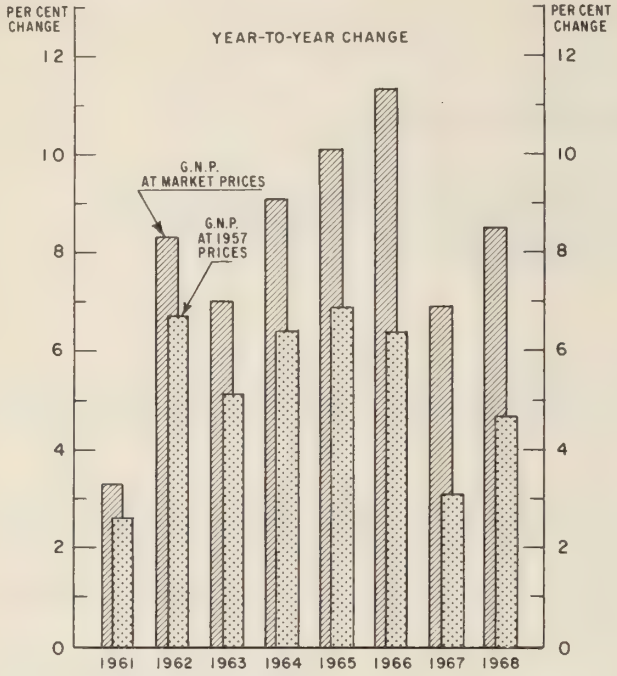
The monthly and quarterly seasonally adjusted data on dwelling units started and dwelling units completed for both "centres 10,000 and over", and "all centres" have been revised from 1956 to date.

The seasonally adjusted data on dwelling units under construction have been revised for the entire period 1949 to 1968.

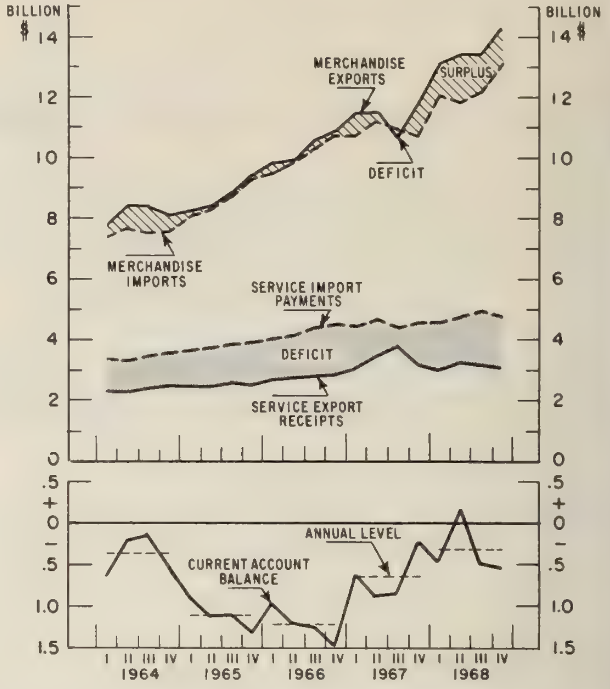
Table 87: Value of Wholesale Trade

Wholesale trade data revised from 1951 forward have been published in "Wholesale Trade", Catalogue No. 63-515, released May 2, 1969. Table 87 will be revised in the June issue of this Review. For the period 1951 to date, revision will reflect results of the 1961 Census of Merchandising. From 1961 to date, the data will also be revised from the 1948 to the 1960 Standard Industrial Classification.

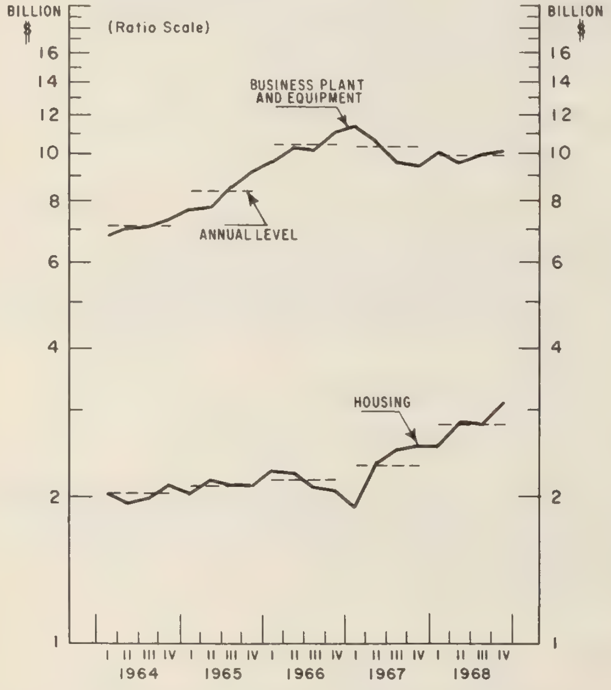
IN 1968 G.N.P. INCREASED BY 8.5 PER CENT. WITH PRICES INCREASING BY 3.6 PER CENT, THE GAIN IN VOLUME WAS 4.7 PER CENT



THE DEFICIT ON CURRENT ACCOUNT NARROWED, AS A SUBSTANTIAL IMPROVEMENT IN THE MERCHANDISE SURPLUS OUTWEIGHED THE DETERIORATION IN THE NON-MERCHANDISE BALANCE

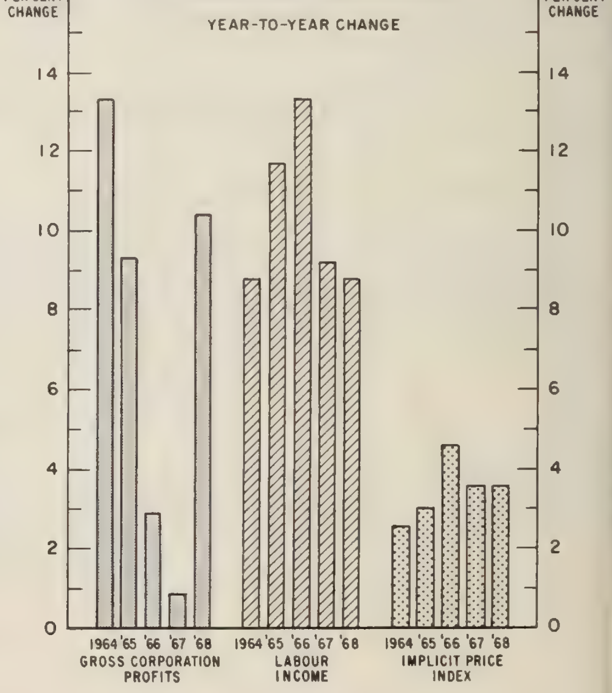


HOUSING OUTLAYS IN 1968 INCREASED STRONGLY, 21.2 PER CENT. BUSINESS SPENDING ON PLANT AND EQUIPMENT RECOVERED SOMEWHAT FROM THE LOW FOURTH QUARTER 1967 RATE; FOR THE YEAR HOWEVER IT FELL 3.4 PER CENT



QUARTERLY DATA, SEASONALLY ADJUSTED, AT ANNUAL RATES

GROSS CORPORATION PROFITS INCREASED MORE RAPIDLY THAN IN 1967 WHILE EXPANSION IN LABOUR INCOME SLOWED SOMEWHAT. THERE WAS CONTINUED PRESSURE ON PRICES; THE IMPLICIT PRICE INDEX OF G.N.P. ROSE BY 3.6 PER CENT, THE SAME RATE AS IN 1967



NATIONAL ACCOUNTS, INCOME AND EXPENDITURE, FOURTH QUARTER AND PRELIMINARY ANNUAL, 1968

Annual Review

This report incorporates some revisions to data for the years 1966, 1967 and the first three quarters of 1968. The series affected are Exports of goods and services, Imports of goods and services, Dividends paid to non-residents for the years 1966 and 1967. Business gross capital formation for the year 1967, and most of the series for the first three quarters of 1968.

Strong external demand for Canadian goods coupled with buoyant domestic markets pushed the level of Gross National Product to $67.4 billion, a rise of 8.5 per cent compared with 6.9 per cent in 1967. This increase is somewhat above the average annual rate of increase of 8.0 per cent for the current expansion period which began in 1961. There was continuing pressure on prices which rose by 3.6 per cent, the same rate as last year. In real terms, Canada's output of goods and services advanced by 4.7 per cent — considerably higher than the 3.1 per cent increase of the preceding year.[1]

Although strength was evident throughout 1968, the economy advanced more vigorously in the beginning and closing quarters of the year. In current dollar terms, the strongest advance occurred in the first quarter which rose by over 3.5 per cent. This was followed by a more moderate 2 per cent gain in the second quarter. The pace of activity then accelerated in the third and final quarters, with increases of 2.5 and 3.5 per cent respectively. In contrast to the first three quarters of the year, when demand was dominated by one or a few components, the advance in the fourth quarter displayed a widespread strength. For the year as a whole, the pattern of demand seemed balanced with all sectors continuing on an upward path or, as in the case of business fixed investment and inventories, renewing an uptrend after declines in 1967.

The pull exercised on this year's expansion by the rapid growth of the United States economy was most evident in the demand for Canadian goods and services abroad which climbed by 13.5 per cent. Canada's merchandise exports jumped by 19.5 per cent and the bulk of this increase was directed to the United States. External demand was particularly strong in the first quarter, when it provided the major stimulus to a renewed fast rate of economic activity. Through the year there were sharp rises in the exports of a wide range of commodities. With the exception of motor vehicles and parts, where trade transactions in both directions were exceptionally large, imports tended to lag behind exports — partly because of rather low current rates of investment in machinery and equipment. As a result Canada's merchandise surplus grew from $0.5 to $1.3 billion to reach its highest level since 1945. The net gain in merchandise trade was partially offset by a larger deficit in services, because of a return to more normal tourist activity after Centennial year. The overall deficit on a National Accounts basis was reduced by half to $332 million.

Rising by 8.5 per cent, consumer purchases maintained the high rates of growth of recent years and accounted for nearly half of the increase in total demand. A feature of the year was the renewed consumer interest in durables, which increased by 10 per cent, more than twice the rate of the last two years. This rise was mostly due to sharp increases in car purchases, following two years of sluggish growth. By contrast, non-durables were rather weak; they rose by 6.5 per cent compared with 9 per cent in 1967. Because of strong price increases in this category, the slowdown was even more pronounced in volume terms. With personal expenditures outpacing the growth of personal disposable income, which was slowed down by higher tax collections, the rate of personal saving showed some decline from the very high levels of recent years.

In gross fixed capital formation, impressive gains were achieved in housing, where unprecedented numbers of both starts and completions pushed investment some 20 per cent above the 1967 level. The entrance of the banks into the field of mortgage lending and the introduction of more flexibility in the mortgage rate structure were important factors facilitating the current high level of activity in house building. By contrast, business capital spending on plant and equipment declined by 3.5 per cent; it nevertheless scored moderate quarterly gains and ended the year well above its trough in the last quarter of 1967.

Business added $479 million to inventories compared with $189 million in 1967. The major accumulation accurred at the retail level and was about equally divided between durable goods, mostly motor vehicles, and non-durables.

Government expenditure on goods and services continued the deceleration which started in 1967; for the first time since 1964 it rose less rapidly than GNP as a whole. Most of the 1968 rise of 7.5 per cent was attributable to increased spending at the provincial-municipal level of government and consisted largely of higher wages and capital outlays. With total revenues rising faster than total expenditures, the surplus, on a National Accounts basis, for all levels of government combined, increased from $157 to $800 million.

---

[1] Real Domestic Product at factor cost by industry of origin, an alternative but conceptually somewhat different measure of economic production, shows a 4.2 per cent advance in real terms compared with a 2.7 per cent increase of the preceding year. Among the differences between the two series are market price valuation versus factor cost, the use of national versus domestic boundaries, and the use of different weight-base periods.

The vigorous performance of the Canadian economy in 1968 was reflected in sharply rising incomes. After declining for two years, corporation profits increased by 17 per cent above their 1967 level. Advances occurred throughout the year, but the fourth quarter leap of over 10 per cent was the most pronounced. Some of the increase was the result of the levelling in capital cost allowances which followed the withdrawal at the end of 1967 of the option to accelerate claims for machinery and equipment. Gross profits (which include these provisions for depreciation) rose by 10 per cent. The improvement in profits was probably facilitated by the existence of strong demand and price pressures in the United States. In spite of sharply increased tax liabilities, partly due to higher rates of corporate income taxes, undistributed corporation profits also rose to record levels.

The 8.8 per cent increase in labour income was derived mostly from higher average earnings, as rates of pay continued to rise steeply in spite of a continued slowdown in employment. The moderate employment growth of around 2 per cent, most of which was absorbed in the service-producing industries, fell short of the increase in the labour force, causing the unemployment rate to climb from 4.1 to 4.8 per cent. There were indications of good productivity gains this year, especially in the goods-producing industries, where large increases in output were realized with practically unchanged employment levels.

Demand and its Sources of Supply

[2] GNP inclusive of the residual error of estimate.

Price Movements

Aggregate price change as measured by the implicit price index of Gross National Expenditure rose by 3.6 per cent in 1968, the same rate of advance as in 1967. Larger increases than in the previous year occurred in all major components except exports; significantly higher import prices—which are reflected in the components of GNE but are subtracted from the aggregate deflator—dampened the overall increase. The following table shows the year-to-year changes in the implicit price indexes of the major components of GNE.

In personal expenditure, a sharp acceleration in the rate of price change in non-durables offset lower rates of increase in durables and services. Among non-durable items, increases of 11.5 and 7.2 per cent in the prices of tobacco and liquor respectively, together with a 3.8 per cent increase in gasoline, oil and grease, were largely the result of higher taxes. Food prices rose by 3.3 per cent after being virtually unchanged in 1967; increases were widespread but most notable in dairy products, fish, fresh fruit, canned vegetables and frozen foods. Modest price increases in furniture and a slight decline in household appliance prices contributed to the smaller increase in the price component of durables; car prices advanced at the same rate as in the previous year. Service prices continued to rise sharply, 4.7 per cent compared with 5.7 per cent in 1967. Most prominent were the increased costs for medical care, recreation, education and transportation, while rents also rose more strongly.

Implicit Price Indexes

Percentage change from the previous year

	1962	1963	1964	1965	1966	1967	1968
Personal expenditure	1.3	1.6	1.5	1.9	3.5	3.3	3.8
Non-durable goods	1.2	1.7	1.7	1.9	4.1	1.9	3.7
Food	2.0	2.6	1.6	2.6	6.2	0.1	3.3
Non-food	0.5	0.9	1.8	1.5	2.6	3.5	4.2
Durable goods	- 0.2	0.3	- 1.0	- 0.3	—	2.6	1.4
Total goods	0.9	1.4	1.0	1.5	3.2	2.2	3.1
Services excluding net expenditure abroad	1.7	1.4	2.3	2.9	3.9	5.7	4.7
(Personal expenditure excluding food)	(1.0)	(1.1)	(1.6)	(1.7)	(2.8)	(4.2)	(4.0)
Government expenditure	2.7	4.1	3.2	5.0	6.3	4.8	6.5
Business gross fixed capital formation	2.8	3.1	4.4	4.3	3.8	2.0	2.9
Residential construction	2.9	3.4	5.5	5.0	6.0	6.2	6.7
Non-residential construction	2.2	3.4	4.4	6.1	5.4	4.9	4.3
Machinery and equipment	3.0	2.6	3.8	2.7	2.0	- 1.7	- 0.7
Exports	3.1	1.2	2.0	1.4	3.3	1.8	1.0
Imports	4.1	2.9	1.2	0.4	2.1	1.1	2.3
Gross National Expenditure	1.5	1.8	2.6	3.0	4.6	3.6	3.6

For the third successive year, strong increases occurred in the implicit price indexes of residential and non-residential construction; labour costs rose by 8 per cent, while the materials component advanced by 2.7 per cent. Machinery and equipment prices were lower in 1968 as a result of the removal of the federal sales tax on production machinery and equipment in June of 1967.

The Components of Demand

Personal Expenditure

Reflecting particularly strong increases in the first and third quarters, personal expenditure on goods and services reached a level of $40.9 billion n 1968, an advance of 8.5 per cent from the previous year compared with an increase of some 8 per cent in 1967. Notable features of the pattern of expenditure were a sharply higher rate of advance n durable goods and a much lower rate of increase n non-durable goods than in the previous two years. Price increases accelerated noticeably at the total evel, the result of significantly higher prices for non-durables; the rate of price advance eased in both durable goods and services.

Expenditures on durable goods increased by 0 per cent, better than twice the rate of advance n 1966 and 1967. Pacing this rise was a 12.5 per cent increase in purchases of new and used cars which showed no change in 1966 and a 3 per cent gain in 1967. New car outlays rose more sharply, 16 per cent, with purchases of cars of overseas manufacture increasing by over 50 per cent. Home furnishings and appliances registered increases of 9.5 and 9 per cent respectively, while furniture outlays increased by 2 per cent.

After advances of 9.5 and 9 per cent in 1966 and 1967 respectively, expenditures on non-durable goods rose by 6.5 per cent with price increases accelerating sharply, the advance in real terms was just over 2.5 per cent. Higher outlays for tobacco and liquor were more than offset by price advances; in volume terms, both items declined by about 4 per cent. Food prices, which held virtually steady in 1967, rose by nearly 3.5 per cent; consequently the 5 per cent increase in outlays for food was considerably reduced in real terms. Expenditure on clothing increased at a lower rate than in 1967; with price advances easing noticeably, however, the gain in volume was somewhat larger.

The services aggregate advanced at a higher rate than in the two previous years, 10.5 per cent compared with 9 and 8 per cent respectively in 1966 and 1967. Increases of 10 and 11 per cent were recorded in shelter and medical care, while the household operations and financial services components rose by more than 8 per cent. Recreation expenditures in Canada declined by 12 per cent from the Expo-bolstered level of 1967. A considerable part of the increased demand for all services was attributable to substantially higher outlays by Canadians travelling abroad.

Personal Expenditure

Percentage changes of selected items

	Year 1964 to year 1965	Year 1965 to year 1966	Year 1966 to year 1967	Year 1967 to year 1968

Total personal expenditure	8.1	8.7	8.2	8.5

Business Gross Fixed Capital Formation

Business gross fixed capital formation, including housing, totalled $12.8 billion in 1968, an increase of 1 per cent from the level of the previous year. Outlays for new housing registered a sharp 21 per cent advance, while expenditure for machinery and equipment declined 5.5 per cent; outlays for non-residential construction dipped slightly from the 1967 level. The increase in housing was confined to the second and fourth quarters, while advances in expenditure for business plant and equipment from the low level of the final quarter of 1967 occurred in all but the second quarter. These upward trends are expected to continue in 1969; the survey of capital spending intentions anticipates increases of 12.5, 8.5 and 9 per cent respectively in housing, non-residential construction, and machinery and equipment.

Decreases in non-residential construction in 1968 by manufacturers, mining, financial and commercial services more than offset increases by utilities, trade firms and institutions. Spending cuts by farmers and manufacturers were mainly responsible for the decline in machinery and equipment: decreases were widespread within manufacturing, with the largest cutbacks occurring in the paper and transportation equipment industries.

In contrast, outlays for housing registered their largest increase in a decade. Housing starts reached an annual rate of 202,000 units in the first quarter, declined to 174,000 in the third, then rebounded to 231,000 in the fourth; for the year, starts totalled 197,000 – 20 per cent above the figure for 1967. More than nine tenths of the increase of almost 33,000 units was in multiple dwellings; single family starts rose only by 2,800. The rate of completions rose throughout the year, reaching an annual rate of 182,000 units in the fourth quarter; the total for 1968 was 171,000 units, 14.5 per cent higher than in the previous year. Units under construction at the end of December numbered almost 127,000 compared with 103,000 in December of 1967.

The large increase in housing starts can be attributed to a more flexible system of determining NHA mortgage rates, the special CMHC provision of direct mortgage loans to building beginning in October, and the re-entry of the banks into the field of mortgage lending.

The following table shows the strong demand for mortgage credit and the response in supply in 1968. NHA approved lenders showed the sharpest increase in mortgage lending in 1968 partly because of a change of NHA regulations in February 1968 permitting them to earn current mortgage yields for a term of 15 to 25 years on NHA loans to corporate borrowers for multiple-dwelling projects The increase in National Housing Act loans accompanied a narrowing in the spread between conventional and NHA mortgage interest rates. The decline in direct lending by Central Mortgage and Housing Corporation mainly affected loans for construction of single-family dwellings.

Investment in Non-farm Business Inventories

Investment in non-farm business inventories showed an accumulation of $479 million in 1968, compared with the $189 million accumulation of the previous year. Accumulation occurred in every quarter, with a strong pick-up in the second half of the year.

The strongest investment was by retail trade dealers, in both durable and non-durable goods. Motor vehicle dealers accounted for virtually all the stock build-up in durables, while increases were widespread in non-durables. The stock-to-sales ratio was marginally higher than in 1967, and displayed little change between quarters.

There was moderate accumulation in the stocks of wholesalers, equally divided between durables and non-durables. The average stock-to-sales ratio was virtually the same as in 1967.

In manufacturing, both durable and non-durable goods-producing industries experienced moderate investment; this contrasts with 1967, when stocks of durables were liquidated and non-durables showed a higher rate of accumulation than in 1968. In durables, the build-up was concentrated mainly in the transportation, primary metal, metal fabricating and machinery-producing industries. In non-durables, movements were mixed and generally small. The average stock-to-shipments ratio was lower than in the previous year.

[1] Seasonally adjusted at annual rates.

Exports and Imports of Goods and Services

Canada's exports of goods and services rose to $16.7 billion in 1968, an increase of 13.5 per cent from the 1967 level. With imports rising at a lesser rate, 10.5 per cent, the deficit on external account (on a National Accounts basis) declined by half to $332 million. The merchandise trade surplus increased by $814 million to $1,295 million, all attributable to an improvement of $825 million in the balance with the United States. This surplus was partly offset by a deterioration of $479 million in the non-merchandise deficit.

Reflecting strong gains in the first and fourth quarters, merchandise exports increased by 19.5 per cent in 1968—the largest percentage gain in 17 years. On a "Trade of Canada" basis, over 40 per cent of the $2.1 billion increase in domestic exports occurred in motor vehicles and parts; metals and minerals contributed around 20 per cent, and lumber and newsprint about 13 per cent. By areas, exports to the United States rose by over $1.8 billion or 25 per cent, while purchases by the United Kingdom, Japan and the European Economic Community increased by 4, 6 and 11 per cent respectively.

Merchandise imports rose by 13 per cent, with the major increases also occurring in the first and fourth quarters. Motor vehicles and parts accounted for over half the increase, with energy materials and precious metals also showing significant advances. Machinery imports showed a decline, in line with the lower investment program. The United States accounted for over $1 billion of the total increase in imports of $1.3 billion, followed by Venezuela, Japan, the European Economic Community and the United Kingdom.

The main element in the larger service deficit was the deterioration of $435 million in the net balance on tourist and travel transactions. Receipts fell by $312 million from the Expo-bolstered level of 1967, while payments rose $123 million.

The Government Sector

Total revenues of all governments combined in 1968 (excluding intergovernmental transfers) increased by over 13 per cent to $24,155 million. Total expenditures rose less sharply, by about 11.5 per cent, to a level of $23,355 million, resulting in an increase in the combined surplus (on a National Accounts basis) from $157 million in 1967 to $800 million in 1968.

With the exception of withholding taxes on investment income of non-residents, all revenue components advanced during the year. About half of the increase occurred in revenues from personal and corporate direct taxes which rose by 20 per cent from 1967. The major portion of the increase in this component was at the federal level and was associated with the imposition at the beginning of the year of a 3 per cent surtax on personal and corporate taxes. The increase at the provincial-municipal level also reflected some tax rate changes: the imposition of a surtax on personal income tax in the province of Quebec and higher hospital insurance premiums in Ontario.

Total indirect tax revenue rose by 8.5 per cent with the increase concentrated at the provincial-municipal level. A large portion of the provincia increase took place in revenues from gasoline and sales taxes; the result of both higher sales and tax rates. Gasoline and fuel oil taxes were increased in seven provinces; the general sales tax was raised in two provinces and the base broadened in fou others; also the tobacco tax was raised in five provinces. The gain in property taxes, accounting for most of the rise at the municipal level, was also associated with higher tax rates.

Turning to the expenditure components, th largest increases, about $1,000 million each occurred in expenditure on goods and services an transfer payments to persons. The advance in outlays on goods and services was particularly strong at the provincial-municipal level and was associated with higher wage payments and capital outlays. At the federal level, the increase occurred in non-defence spending; defence expenditures were virtually unchanged.

About two thirds of the increase in transfer payments to persons took place at the provincial-municipal level. Grants to hospitals and educational institutions and payments under the Ontario Residential Property Tax Reduction Act made in the second half of the year were mainly responsible for the rise. At the federal level, the increase was due to the further lowering of the age limit for old age security payments, higher unemployment benefits, (reflecting both higher levels of unemployment and a change in the benefit rates), and to larger adult occupational training grants.

Transfer payments from the federal government to provincial and municipal governments increased by $460 million during the year. The largest increases occurred in payments under the taxation agreements, post-secondary education grants and grants under the Canada Assistance Plan and under the Hospital and Diagnostic Services Act.

With federal government expenditures rising by almost 11 per cent and revenues by 12 per cent, the deficit narrowed somewhat, from $256 million to $165 million. At the provincial-municipal level, revenues rose much more sharply than expenditures and resulted in a considerable narrowing of the deficit from $473 million to $25 million. The combined surplus of the Canada and Quebec Pension Plans increased from $886 million in 1967 to $990 million in 1968.

Components of Income

Labour Income

The increase in labour income of 8.5 per cent was slightly less than the 9 per cent gain recorded in 1967. However, the quarterly gains for the two years were quite different, decreasing in 1967 and increasing in 1968. With a moderate employment increase of 2 per cent, most of the gain reflected higher average earnings, thus repeating last year's experience.

In the goods-producing industries average earnings increased at a slightly faster rate than in 1967, while employment remained approximately constant; the overall increase in wages and salaries of 5.5 per cent was slightly lower than in the previous year. Wages and salaries in manufacturing increased by 6.5 per cent, in construction by 2 per cent, and in the primary industries by 4.5 per cent. In manufacturing, average earnings increased at a slightly faster rate than in 1967; employment for 1968 as a whole showed little change, though there were increases in the second half of the year. The relatively lower gains recorded in construction and in the primary industries were the result of lower rates of increase in average earnings and decreases in employment.

Wages and salaries in the service-producing industries increased by about 11 per cent as compared with 12 per cent in 1967. Increases in employment and average earnings were slightly lower than those recorded in 1967. Finance, insurance and real estate showed a marked acceleration, increasing by 12 per cent compared with 8.5 per cent in 1967, while transportation, storage and communication slowed down from a 12.5 per cent increase to 8.5 per cent in 1968. Other industry groups increased at almost the same rates as last year.

Corporation Profits

After declines in the preceding two years, net corporation profits advanced 17 per cent to reach a level of $5.9 billion. Quarterly, profits gathered force from a moderate gain of 2 per cent in the first quarter, to growth rates of 6 and 5 per cent in the second and third quarters, and mounted 10 per cent in the final quarter.

Increases in costs which were a factor in the rather small increments in gross profits in 1966 and 1967 eased in 1968 and this, combined with a relatively strong sales performance in 1968, induced a marked recovery in profits. The pattern of net profits was further influenced by movements in capital consumption allowances in these years. In 1966 and 1967 the small increases in gross profits were more than absorbed by increases in capital consumption allowances of 10 and 6 per cent respectively, while in 1968 a levelling off in these allowances combined with the 10 per cent increase in gross profits to produce the 17 per cent increase. These movements in capital cost allowances relate to the withdrawal in late 1967 of special provisions permitting accelerated write-offs of certain classes of assets.

With few exceptions, profits advances predominated in all industry groups. The mining industry posted a 9 per cent profit improvement, manufacturing 25 per cent, wholesale trade 14 per cent, retail trade 4 per cent, and finance 30 per cent. The exceptions occurred in the utilities group where profits remained unchanged, in the transportation, storage, and communication industry which experienced a 2 per cent drop, and in services, where profits slipped 12 per cent.

Within the manufacturing group, profit mounted in all industries except petroleum and coal which dipped 5 per cent. Brisk rises occurred in the food and beverage, textile, wood, paper, metal, non-metallic mineral and chemical groups, while more modest advances were registered in the rubber, printing, and electrical groups.

Other Investment Income

Rent, interest and miscellaneous investment income rose by 9.5 per cent in 1968 compared with 13 per cent in 1967. Government investment income for all levels combined was higher by $225 million against a rise of $336 million in 1967. About 45 per cent of the increase in government investment income came from higher trading profits of government enterprises.

Accrued Net Income of Farm Operators

Accrued net income of farm operators advanced slightly more than 5.5 per cent from the previous year reaching a level of $1,796 million.

The value of grain production rose largely as a result of an increase in the estimated value of the 1968 crop. Partially offsetting this gain was the unusually low level of profits of the Canadian Wheat Board reflecting in the main, lower exports over the period. The value of livestock production was virtually unchanged from the preceding year. Cash income from the sale of other farm products showed a moderate increase, somewhat lower than the gain in 1967. In this component, the most significant contributions came from dairy products (which include federal subsidies).

As a result of the above increases, the gross income of farm operators rose by over 10 per cent during the year. However, higher operating expenses dampened the increase somewhat, leading to a 5.5 per cent increase in net income.

Net income of farm operators, which is reflected in personal income, advanced 13 per cent from 1967, due in the main to the record high payments of the Canadian Wheat Board, in respect of the 1966-67 crop year. These payments reached a level of $359 million compared with $312 million and $229 million in 1967 and 1966 respectively.

Net Income of Non-farm Unincorporated Business

Net income of non-farm unincorporated business rose to a level of $3,422 million, 7 per cent higher than the previous year. Gains were widespread with the most significant advance occurring in construction, which contributed more than one-third of the increase. The service industries and retail trade made somewhat smaller contributions.

Real Domestic Product[2]

In 1968 real domestic product rose by 4.2 per cent compared with a 2.7 per cent advance in 1967. Although the increase in the output of the domestic economy was widespread, the largest contribution (nearly 30 per cent) came from the manufacturing division, almost equally shared between durables and non-durables. Finance, insurance and real estate; the community, business and personal service industries; and trade each contributed 10 per cent to the increase. Two-thirds of the increase in trade came from retail trade, with sales of department stores and motor vehicle dealers registering the most important increases. Other industries that registered increases were transportation, storage and communication, and construction.

Fourth Quarter 1968

The Canadian economy ended the year on a strong note. A fourth quarter advance of 3.5 per cent carried Gross National Product to the $70 billion mark, seasonally adjusted at annual rates. After allowing for price rises, the gain in real terms was 2.6 per cent,[3] the largest since the first quarter of 1966.

The forces of expansion were widespread. Personal expenditures rose by 2 per cent, with non-durables and services accounting for the entire increase, as sales of cars, the major component in durables, remained practically unchanged after a large increase in the third quarter. Government spending on goods and services advanced by 4 per cent, compared with rates of increase averaging around 2 per cent in the previous quarters of the year. Turning to investment, there was a forward thrust of building activity in housing—the second this year, the first having occurred in the second quarter. The current rise of 9 per cent was reflected in an unprecedented level of starts as well as a high level of completions. Investment in plant and equipment rose by a moderate 1.5 per cent, entirely the result of sharply increased outlays in non-residential construction, as investment in machinery and equipment declined slightly.

The fourth quarter saw intensified activity in the external sector. There was a sharply renewed expansion in merchandise exports, 6.5 per cent, after a slight decline in the preceding quarter, and a marked acceleration in merchandise imports, 8 per cent from 3 per cent in the preceding quarter. Because a moderate deterioration in the merchandise surplus was almost offset by a narrowing of the deficit in service transactions, the overall deficit widened only slightly, from $496 to $524 million on a National Accounts basis.

---

[2] For further information see "Index of Industrial Production", January 1969, DBS Catalogue No. 61-005.

[3] Real Domestic Product at factor cost shows a 2 per cent gain in real terms of the quarter. See footnote[1] on page 1 for explanation of differences between the two measures.

The salient features on the income side were the very strong increases in corporation profits and in wages and salaries. A significant part of the unusually large 10 per cent rise in profits was due to a levelling in capital cost allowances; gross profits which include capital cost allowances rose by 6 per cent. The rise in net profits was centered in manufacturing which recorded a 24 per cent increase, with all component groups sharing in the advance. Wages and salaries also made hefty gains, 3.5 per cent, the largest increase since the first quarter of 1966. Widespread employment increases contributed about as much as higher rates of pay to the total wage bill; this was a marked departure from the experience of recent quarters, when higher average earnings were the dominant factor. After six quarters of little change, the 2 per cent pick-up in manufacturing employment was particularly notable. With employment rising a little faster than the labour force, the average unemployment rate for the quarter fell slightly to 4.9 per cent.

Price Movements

The implicit price index for Gross National Expenditure rose by 0.8 per cent compared with an advance of 1.0 per cent in the third quarter. Lower rates of price increase in gross fixed capital formation and in government expenditure more than offset some acceleration in consumer expenditure and in export prices.

The personal expenditure price index registered an increase of 1.1 per cent, larger than in the previous quarter, with an acceleration in the rate of price increase in goods and a continued high rate of advance in services. Much of the 1.1 per cent advance in the non-durable goods index was attributable to a 1.7 per cent increase in food prices, primarily dairy products, beef and pork. Increases were also recorded in the prices for electricity, women's clothing and auto parts. The durable goods index rose slightly, the result of higher prices for new cars.

Among service items, the largest increases were recorded in transportation, medical care and recreation; rents continued to advance, but at a lower rate than in the previous quarter.

In business gross fixed capital formation, machinery and equipment prices moved up marginally. Prices associated with construction were mixed: they slowed down noticeably in residential but accelerated sharply in non-residential construction. In total, the price index for capital goods rose by 0.7 per cent compared with 0.9 per cent last quarter.

The Components of Demand

Personal expenditure reached a level of $42.2 billion, seasonally adjusted at annual rates, an increase of 2 per cent from the third quarter. Both non-durable goods and services registered advances, while purchases of durable goods were virtually unchanged after increasing by 8 per cent in the previous quarter.

Expenditure on non-durable goods increased by over 2.5 per cent, with nearly all components contributing to the rise. Advances of 5.5 and 5 per cent respectively occurred in tobacco and alcoholic beverages, while expenditure on energy sources rose by 1 per cent after a large increase in the previous quarter. Both the food and clothing components advanced by 1.5 per cent, considerably more than in the third quarter.

Among the components of durable goods, new and used car purchases increased only slightly after the large 13.5 per cent advance of the previous quarter; purchases of cars of overseas manufacture declined for the first time in seven quarters. Increases of 3 and 4 per cent respectively occurred in home furnishings and furniture, while the appliances and radios series declined by 3.5 per cent after a large rise in the third quarter.

Among components of services, increases of between 2.5 and 3 per cent occurred in recreation, transportation, medical care and household operations. Expenditures for shelter advanced by 1 per cent, less than half the rate of the average increase of the five previous quarters.

The rate of business gross fixed capital formation accelerated recording a 3.1 per cent increase compared with 1.8 per cent in the third quarter. This was entirely the result of sharply increased activity in both residential and non-residential construction, as investment in machinery and equipment declined slightly.

Housing construction paced the advance with a jump of 8.9 per cent, reflecting sharp increases in the number of starts, which rose from an annual rate of 174,000 to 231,000 units, and in completions, which rose from 174,000 to 182,000 units. By the end of December, the carry-over of units under construction amounted to 126,600 units, some 23,900 higher than at the start of the year. Non-residential construction was also very strong. The increase of 3.7 per cent, the largest this year, carried this investment category to its highest level since the first quarter of 1967. By contrast, investment in machinery and equipment fell somewhat, after a 3.6 per cent gain in the preceding quarter.

Business inventories were accumulated at the annual rate of $552 million, compared with an accumulation of $680 million in the third quarter. There was substantial investment at all three major industry levels, manufacturing, wholesale trade, and retail trade, but the latter, with a $324 million investment, contributed over half of the total.

In manufacturing, most of the investment took place in durables, with a particularly sharp build-up in the stocks of metal, metal fabricating and machinery producing industries. Among non-durables, large increases in the stocks of food, tobacco, and petroleum were offset by a marked liquidation in the paper and leather producing industries. The stock-to-shipments ratio was higher than that of the previous quarter. With new orders being higher than shipments, the quarter ended with an increased backlog of unfilled orders.

In wholesale trade, the major part of the restocking also took place in durable lines, which represented a shift from a small liquidation in the third quarter. Increases in the stocks of motor vehicle dealers made up the bulk of the sizeable increase in retail trade inventories. The stock-to-sales ratio was higher than in the third quarter for both wholesale and retail trade, though the change was much more pronounced in the former.

Transactions with Non-residents

Seasonally adjusted at annual rates, National Accounts basis

	Exports			Imports

Totals	**16,636**	**17,412**	**4.7**	**17,132**	**17,936**	**4.7**

With exports of goods and services increasing by $776 million and imports by $804 million, the balance on current account on a National Accounts basis for the quarter widened from a deficit of $496 million at annual rates to a deficit of $524 million. The merchandise surplus dropped from $1,268 to $1,144 million, while the non-merchandise deficit narrowed from $1,764 to $1,668 million.

The narrowing of the non-merchandise trade deficit is mainly attributable to lower deficits in tourist and travel and in interest and dividends.

Merchandise exports rose by 6.5 per cent from the third quarter level. Increases were marked for forest products, automotive products, chemicals and fertilizers, aircraft and parts. Merchandise imports climbed 8 per cent. Increases were recorded in industrial materials, construction materials, producers' equipment, motor vehicles and parts, other transportation equipment, food and other consumer goods.

The Government Sector

Total revenues of all governments combined (excluding inter-governmental transfers) rose to $25,836 million at an annual rate in the fourth quarter, 6.5 per cent above the third quarter rate. More than half of the increase occurred in revenues from direct taxation, particularly in personal income taxes levied on rising incomes. Indirect tax revenues also rose sharply during the quarter with the larger increases occurring in federal excise taxes and provincial sales and gasoline taxes. Contributions to social insurance and government pension funds advanced more sharply than usual, resulting from salary increases to federal employees.

Total expenditures of all governments increased by just over 2.5 per cent in the quarter, to $24,460 million. The major portion of the rise took place in expenditures on goods and services. Federal outlays increased more sharply than those at the provincial-municipal level reflecting, in part, higher wage and salary payments. Transfer payments to the personal sector rose by $160 million. At the federal evel, increases in scholarships and grants and adult occupational training payments were dampened somewhat by a decline in unemployment insurance benefits. The increase in provincial transfers was due mainly to higher grants to educational institu-ions.

With the increase in revenues more than double he rise in expenditures, the surplus of the government sector as a whole, on a National Accounts basis, increased from $436 million in the third uarter to $1,376 million in the fourth. More than alf of the change occurred at the provincial-municipal level, where a deficit of $460 million ave way to a surplus of $84 million. The federal overnment moved from a deficit of $80 million to a urplus of $248 million while the surplus of the Canada and Quebec Pension Plans increased lightly.

The Components of Income

Total labour income increased by almost 3.5 per cent in the fourth quarter — the largest quarterly gain in almost three years. The service-producing industries advanced by slightly more than 4 per cent, the goods-producing industries by 2.5 per cent.

The 2.5 per cent increase in the goods-producing industries was notably higher than the average quarterly advances in 1967 and in 1968 and accounted for about 30 per cent of the total increase in labour income. Manufacturing registered the largest gain, 3.5 per cent, reflecting employment increases and higher average earnings in about equal proportion. The rise in employment was a reversal of the general trend of declines or little change during the previous six quarters, while the increase in average earnings continued the trend of the last few years. In construction, wages and salaries increased only slightly, while in the primary industries they remained virtually unchanged.

The 4 per cent gain in the service-producing industries was also higher than in the preceding quarters. In transportation, storage, communication and other utilities labour income increased by over 6 per cent, with slightly larger increases in average earnings than in employment. All other industries showed increases of about 4 per cent.

Net corporation profits posted an exceptionally strong 10 per cent rise in the fourth quarter, to a level of $6.6 billion, seasonally adjusted at annual rates. It was the strongest quarterly advance since the second quarter of 1961. Gross profits also increased strongly, 6 per cent, while capital consumption allowances were virtually unchanged.

The chief momentum in the fourth quarter improvement came from a 24 per cent expansion in manufacturing profits. Movements were mixed in other groups: both wholesale and retail trade maintained advances of 12 and 8 per cent respectively; finance, insurance and real estate increased by 5 per cent and the services group by 8 per cent. Declines were registered in mining, 14 per cent, transportation, storage and communication, 3 per cent, and in utilities, 9 per cent.

All groups within the manufacturing industry displayed higher fourth quarter profit advances. Substantial rises, of over 20 per cent, were experienced in the rubber, textile, wood, paper, printing, metal, electrical and petroleum and coal industries. Lesser gains were made in the food and beverage, non-metallic mineral, and chemical groups.

Rent, interest and miscellaneous investment income rose by $168 million, or by 3.5 per cent, from the level of the third quarter, on a seasonally adjusted basis at annual rates. The increase was mainly attributable to higher trading profits of government enterprises.

Accrued net income of farm operators rose 6 per cent from the third quarter. With the value of grain production remaining unchanged, the increase was almost entirely due to a sharp rise in the value of livestock production, largely the result of an accumulation in inventories. Partially offsetting this gain was a decline in cash receipts from the sale of other farm products.

Net income of non-farm unincorporated business increased to $3,536 million, 1.5 per cent above the third quarter level. The gain was almost entirely due to an increase in net income from construction as changes in other industries, notably retail trade and the services, were largely offsetting.

Real Domestic Product[4]

Real Domestic Product, seasonally adjusted, advanced by 2.0 per cent in the final quarter of 1968. This advance, which was the largest since the first quarter of 1966, followed increases of 1.2, 1.4 and 1.0 per cent, respectively, in the first three quarters of this year. The goods-producing industries, with an increase of 3.0 per cent, were responsible for over 70 per cent of the total increase.

Manufacturing accounted for nearly one-half of the total advance, the major part of which came from non-durables. For the first time in many years every one of the major groups in non-durables recorded increases, but the most notable occurred in paper and allied industries. In durables the most significant increase took place in sawmills and planing mills which were affected by greater exports of lumber to the United States.

The transportation, storage and communication and the agriculture divisions accounted for close to one third of the total advance. The most significant changes in the former division were a large increase in water transportation in the latter part of the quarter and a large increase in railway transportation (particularly of agricultural products) in the earlier part of the quarter. A substantial increase in the production of livestock was the main reason for the advance in agricultural output.

INDUSTRIAL PRODUCTION (More detail in Table 16)

THE INDEX OF INDUSTRIAL PRODUCTION ROSE 0.7 PER CENT IN FEBRUARY. THE INCREASE VIRTUALLY RETURNED THE INDEX TO ITS DECEMBER 1968 LEVEL. ALL OF THE GAIN WAS DUE TO ADVANCES IN MANUFACTURING, AS BOTH MINING AND UTILITIES DECLINED.

		total industrial production (1961=100)	manufacturing (1961=100)			(1961=100)

[1] Department store sales are not available due to definitional changes in January 1968.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

IN FEBRUARY THE LARGE INCREASE IN THE VALUE OF RESIDENTIAL BUILDING PERMITS, PARTIALLY OFFSET BY THE DECLINE IN NON-RESIDENTIAL PERMITS, RESULTED IN A SLIGHT INCREASE IN TOTAL BUILDING PERMITS.

IN MARCH HOUSING STARTS AND COMPLETIONS DROPPED FROM THE HIGH FEBRUARY LEVELS. THE NUMBER OF UNITS UNDE CONSTRUCTION CONTINUED TO INCREASE.

		value of building permits[1]			new dwelling construction, centres 10,000 and over		
		total	non-residential	residential	starts, total	completions, total	under construction thousand units, end of month
		million dollars			thousand units at annual rates

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary vidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census f Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in on-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées nd other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

---

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. [2] Includes residual error of estimate. **Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] The labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulletin, (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing th seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such a those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are n shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes als publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the onth. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and ublic administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average eekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

[1] The data for the current year are subject to revision. [2] Includes gold. [3] Consists of general wholesale index less animal products and vegetable products component groups. [4] Consists of iron products and non-ferrous metals products component groups less gold. [5] These two series comprise the general wholesale index. [6] Excludes gold. **Source: Prices and Price Indexes (62-002), D. B. S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing shipments[1] by industry based on the 1960 standard industrial classification (million dollars)

monthly averages or months	total shipments	non-durables	durables	foods and beverages	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended or cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

---

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts
[4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garmer Shipments (34-001), D. B. S.**

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill hipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian ulp and Paper Association and Newsprint Association of Canada.**

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipment to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural stee fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 196 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iro and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and istributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor ehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

[1] Includes record players. [2] Includes producers' shipments for export. [3] Includes portables. [4] Radio phonograph combinations. [5] Includes monaural an stereo with and without amplifiers. [6] Excludes producers' shipments for export. [7] Included with "total television receivers". [8] Customs clearance; radio sets includ all types; television sets include colour and black and white. **Sources: Radio and Television Receiving Sets (43-004); Trade of Canada, Imports (65-007), D.B.S.**

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. [1]Includes cru oil, condensate and pentanes plus. [2]Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. [3]Gro new production by field less field flared and waste. [4]By gas utilities. **Sources: Crude Petroleum and Natural Gas Production (26-006), Refined Petroleum Produc (45-004), Gas Utilities (55-002), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery oduction (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane comingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove l, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a mparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha speciales, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

Note: Components may not add to totals due to rounding differences. [1]The data are collected for 1,400 municipalities and individual figures are availabl on request. [2]Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, th number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. **Source: Building Permits (64-001), D.B.S**

---

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the tabl due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normal follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerab change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage side. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan eas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The re- ainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The to value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above tal covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. E though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the rage of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. tern grain prices used in the construction of the Index prior to August 1, 1967 are final prices. From August 1, 1967 to date, the western grain prices used in the lex are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade " hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains rterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. ---

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchandising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all ther stores, the 1968 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

*Credit extended mainly to individuals; includes unidentifiable amounts of credit extended for non-consumer purposes; excludes certain forms, mainly service redit extended by doctors, dentists, lawyers, pawnbrokers, travel companies, restaurants and personal credit for which no statistics are available. [1]Conditional ales agreements held in connection with the financing of retail purchases of consumers' goods and repaid in instalments. [2]Companies licensed under the Small .oans Act and affiliated compagnies engaged in making personal loans. [3]Cash loans with no conditional sales contract but usually repaid in instalments. [4]Personal oans other than those fully secured by marketable bonds and stocks and other than home improvement loans. [5]Loans other than secured loans and mortgage loans. Figures for dates other than year-end are estimated on the basis of loans made by sixteen companies. [7]Sum of instalment credit of clothing, hardware and jewellery tores, fuel dealers and "all other trades" in Table 89. [8]Sum of charge accounts of clothing, hardware, independent grocery and combination stores, jewellery and eneral stores, fuel dealers, garages and filling stations and "all other trades" in Table 89. [9]Amount owing to oil companies ex commercial accounts. [10]Excludes ortgage loans; data available yearly only. [11]The data for Quebec savings banks loans and motor vehicle dealers are not seasonally adjusted as no seasonality is resent; these series are repeated in the unadjusted form. **Sources: Credit Statistics (61-004), D.B.S.; Bank of Canada, Dept. of Insurance, Dept. of Finance and ept. of Agriculture.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 ave been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and ieir sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and etherlands.

Source: Trade of Canada, Imports (65-007), D. B. S.

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in t table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United Sta railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Source Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes cheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, 964 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit rough Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because f survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 8, 000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

[1] Data from February 1967 onwards for net receipts include gathering and trunk lines. Prior to that date they include trunk lines only. [2] Excludes distribution ystems. [3] Received from field and processing plants by transport systems. [4] Starting with 1967, operating revenues of crude oil products are no longer available eparately; they are included with the crude oil operating revenues. **Sources: Oil Pipeline Transport (55-001) and Gas Utilities (55-002), D.B.S.**

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does r include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontari Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements mc under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commerci Failures (61-002) Quarterly, D. B. S.**

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-es of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and divided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than e year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of nada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ncluding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

Note: Components may not add to totals due to partial revisions.
[1] End of period. [2] Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [3] Figures are subject to revision. Series cover all publi announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4] Includes Canadian Pension P series bonds issued by the provinces and their agencies and purchased by the C. P. P. Investment Fund. [5] Consists of issues of Canadian religious and ot institutions and Canadian dollar issues of foreign debtors. **Source: Statistical Summary of Bank of Canada.**

---

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net fits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all npanies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in nada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely nparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal ricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes o storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

NOTE TO USERS

Changes occur from time to time in tables contained in this Review to reflect newly available economic series, changes made in concepts, composition, comparability, seasonal adjustment methods, benchmark data, etc.

Changes in this issue are as follows:

Table 15: Real Domestic Products

The unadjusted and seasonally adjusted Indexes of Real Domestic Products have been revised for the entire year 1968.

Table 16: Industrial Production

The unadjusted Indexes of Industrial Production in Table 16 and its seasonally adjusted counterparts in the same table and on page S-2 have been revised for the entire year 1968.

Table 38: Other Wholesale Price Indexes

This month introduces the building materials indexes, both residential and non-residential, arithmetically converted to a 1961 = 100 time base. Indexes are provided from 1967 to date in this table, and historical series are available if required.

The change is in keeping with Bureau policy to update the time bases for important series. No changes in weights or item content have been introduced at this time. Users are reminded that the total indexes, on a 1961 base, are an arithmetic conversion and hence not equal to the aggregated sum of the components using published weights.

Users may wish to re-weight the components to suit their individual needs. More details of the index construction may be found on p. 41 of "Prices and Price Indexes" DBS, Catalogue No. 62-002.

Table 87: Value of Wholesale Trade

This table has been revised in accordance with the Technical Note No. 5 published in this issue.

Historical series for the 28 trade groups are available upon request.

Table 103: Shipping and Canal Traffic

Data in this table are now available for the entire year 1968.

TECHNICAL NOTE No. 5

WHOLESALE TRADE

Estimates of Wholesale Trade incorporated in Table 87 cover the sales of wholesale merchants only and do not include those of manufacturers' sales branches, primary products dealers, petroleum bulk tank stations or agents and brokers. These data are not adjusted for price changes, seasonal variations or number of business days in the respective months.

Wholesale statistics are collected in two ways: on a location and on an establishment basis. The difference between the two approaches is the definition of the reporting unit. Location is designated as a separate place of business, while the establishment denotes a separate accounting entity capable of providing input and output data for the calculation of gross profit. The majority of establishments are firms but many firms have more than one establishment. The establishment may consist of one or more locations. When location statistics are shown, every location is classified to a kind of business category describing its activity such as motor vehicles, coal and coke, etc. In the case of multi-location establishments, the total establishment is classified under the kind of business category corresponding to the largest location, measured not in terms of sales but in terms of gross profit. For example: an establishment may include a wholesale and a retail location. In location statistics their data will be separately shown in the wholesale and retail universe, but in establishment statistics both will be classified to either wholesale or retail trade, whichever location makes the larger gross profit.

1951-61

The estimates for the years 1951-61 were produced using the location as the reporting unit. Sales were shown for eighteen specified trade groups and an "All other" category ("Wholesale Trade", Monthly, DBS, Catalogue No. 63-008). Annual estimates are available for all years while monthly estimates are only available for 1955 and subsequent years. The estimates have been revised from those originally published in "Wholesale Trade", Occasional, DBS, Catalogue No. 63-515 to bring them in line with the results of the 1961 Census of Merchandising and Services (Wholesale Merchants).

1961-68

The estimates originally published for the period 1961-68 in "Wholesale Trade", Catalogue No. 63-008, were calculated on the location concept. These have now been revised to an establishment base and these revisions are published in "Wholesale Trade" Catalogue No. 63-515. The continuation of this series is available from January 1969 onward in "Wholesale Trade", Catalogue No. 63-008.

The revised establishment base sales are shown for twenty-four specified trade groups as well as two residual categories. (The original eighteen along with six new categories, motor vehicles, floor coverings, grain, scientific and professional equipment and supplies, iron and steel and junk and scrap.) The new trades were formerly included as part of the "All other" category.

The previous estimates were not only revised to a 1961 census figure but to a 1964 unpublished census figure as well. Further revisions will be necessary when the results of the 1966 Census of Merchandising and Services are available later this year.

TECHNICAL NOTE No. 6

CANADIAN INTER-CITY RETAIL PRICE DIFFERENTIAL

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes for May 1965. In developing spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. The up-dating of these measurements of inter-city retail price differentials to May 1968 was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening period as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly.

Inter-city retail price comparisons were drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based. The attached table indicates the comparative index levels for selected groupings of commodities and services as of May 1968. It is planned to revise these index measurements to May 1969. Major omission are shelter (both rented and owned), domestic utilities (fuel, light and water), and restaurant meals. While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require a good deal more research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items. While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

Statistics previously published on differences in retail prices between Canadian cities had been limited to indexes measuring comparitive food price levels. The November 1968 issue of "Prices and Price Indexes", DBS Catalogue No. 62-002 contained a detailed revisions of earlier place-to-place food indexes as well as an extension of these measurements to take in other elements of the family budget.

TOWARDS A MEASUREMENT OF THE ENERGY ECONOMY[1]

A recent study by the Energy and Minerals Section of DBS inter-relates the various energy forms entering the Canadian economy by converting all forms into a common unit, the B.t.u. or British Thermal Unit. This study was made in connection with the development of statistical measures of the importance and impact of energy within Canada. The period covered, 1958-64, was selected mainly because of the availability of comprehensive data but also because it displays many characteristics normally associated with a complete business cycle. It contains a peak growth period, followed by a slight slow-down in the growth rate, then a period of buoyancy which has been sustained through to the present. An attempt can thus be made to relate changes within the energy economy to changes within the total economy, regionally or nationally.

The approach adopted was to develop a series of supply-demand balance sheets which attempt to balance energy availability with energy needs in sufficient detail for examination of the numerous and complex relationships existing between primary and secondary energies. "Primary energies" are these that may be consumed in their naturally occurring state, for example coal, crude oil, and for the purpose of this study, hydro and nuclear generated electricity. "Secondary energies" are those which result from the processing of primary energies, for example electricity from coal-fired power stations, or motor gasoline from refineries processing crude oil.

However much secondary energy may finally be consumed, primary energy must initially be obtained in order to meet both primary and secondary energy requirements. If it is possible to show data on the conversion of primary to secondary forms in detail, then the task of the analyst becomes easier. The balance sheet was thus designed to show:

(a) Total energy requirements of each consuming sector, and the share each energy form, both primary and secondary, enjoys in satisfying these requirements.

(b) The amount of primary energy needed to produce these primary and secondary forms.

The balance sheet does not reflect differences in the prices of the various fuels, and it is conceivable that the conclusions based on "physical" data only might appear in a different light if quantities were related to prices. Furthermore, consumption figures derived from this analysis relate only to the **gross** energy purchased by the final consumer, and do not reflect the energy put to effective use by the consumer. The equipment employing the various fuels differ as to capacity to produce effective heat or energy with the more inefficient wasting greater portions of the potential energy. A prime example of this is found in railway utilization where a switch from coal-fired locomotives to the more efficient oil-burning units resulted in a decline in gross energy utilized — despite increased railway activity — from 127 to 86 trillion B.t.u. between 1958 and 1964. By 1964, as a result, consumption per ton mile dropped from 1,850 to 1,000 B.t.u.'s.

Because data confidentiality problems prevent publication on a provincial basis, five economic regions were considered: (a) Atlantic, (b) Quebec, (c) Ontario, (d) Prairies and (e) British Columbia, Yukon and Northwest Territories. Due to their size, regions can contain areas with varying conditions and, at the extreme, it is conceivable that areas exist within a region with consumption patterns at direct variance with the regional patterns.

For each region and each year a balance sheet has been developed which differentiates between 18 fuel types and 10 consumption sectors (including non-energy use of energy forms). Each balance sheet shows the export-import position, the inter-regional movements of energy, inventory changes and the amount of energy entering into the conversion process. From the resultant output of secondary energies included in the balance sheet it is possible to compute the efficiency of the conversion. (However, any non-energy forms produced in the conversion process, for example, lubricating oil at refineries, have been excluded. It is therefore possible that part of seeming increase in the inefficiency of conversion could be explained by an increase in the output of non-energy forms. The impact of such forms should, however, be minimal.) In addition, the contribution made by each fuel form to the total and the contribution of each consuming sector to the total can be discerned, as well as regional variations in production, consumption, etc. A sample balance sheet is shown in simplified form in Appendix I.

In an analysis of annual balance sheets trends in the various factors emerge such as the growth in the importance of a sector or a fuel, the changing relationships of exports and imports, or the relationship of primary to secondary energy consumption. Again, it is possible to gauge the changing performance of the energy supply industry from the amount of energy required by the industry to produce and transport energy entering into the economy, or from the changing efficiency of energy conversion processes.

Findings

A. Production and Availability

Production and availability in Canada of primary energy forms are shown in Tables 1 and 2 for the years 1958 and 1964. Over this period total production increased from 2,048 to 3,633 trillion B.t.u. Within this exceptionally high growth rate of

---

[1] Prepared in the Energy and Minerals Section, by Messrs. R.L. Borden and M.I. Cavanagh.

10 per cent per annum, however, dramatic changes have taken place in the pattern of energy mix. The contribution of coal has dropped from 12.2 per cent in 1958 to 6.6 per cent in 1964 although the tonnage produced has remained roughly the same. Electricity has also lost ground relative to other forms, while crude petroleum has maintained its share, and natural gas has made very rapid advances. A possibly surprising feature of the data is the significant contribution of wood, particularly in British Columbia.

TABLE 1. Production of Primary Energy, Canada, 1958 and 1964

	1958	1964
	per cent	
Percentage contribution of each primary form to production:		
Coal	12.2	6.6
Liquefied petroleum gases	0.3	1.2
Crude oil	47.3	47.9
Natural gas	19.9	31.5
Electricity	15.1	10.7
Wood	5.2	2.1
Totals	**100.0**	**100.0**
Trillion B.t.u. contribution of each primary form to production:	t.[1] B.t.u.	
Coal	250	240
Liquefied petroleum gases	7	45
Crude oil	968	1,740
Natural gas	407	1,145
Electricity	309	387
Wood	107	76
Totals	**2,048**	**3,633**

[1] t. B.t.u. means trillion (million million) B.t.u.

Availability of primary energy varies considerably from production as can be seen by comparing Table 1 and Table 2 below.

TABLE 2. Availability[1] of Primary Energy, Canada, 1958 and 1964

	1958	1964
	per cent	
Availability of each primary energy form expressed as a percentage of the total:

Liquefied petroleum gases	0.2	0.7
Crude oil	51.1	52.2
Natural gas	12.3	19.5
Electricity	10.7	10.1
Wood	3.9	2.0
Totals	**100.0**	**100.0**
Availability of each primary energy form expressed in trillion B.t.u.:	t. B.t.u.	
Coal	604	588
Liquefied petroleum gases	7	28
Crude oil	1,413	1,983
Natural gas	340	740
Electricity	296	384
Wood	107	75
Totals	**2,767**	**3,798**

[1] Availability means production amended to take into account exports - imports, inventory changes, etc.

B. Exports - Imports

In the period under review, the substantial growth in primary energy production and availability was accompanied by an even greater increase in exports, which rose from 298 to 1,060 trillion B.t.u. Primary energy imports showed a modest increase from 1,002 to 1,238 trillion B.t.u., so that the net deficit in Canada's primary energy trade balance was reduced from 700 to 160 trillion B.t.u. Crude oil and natural gas exports from Western Canada made by far the greatest contribution to the total exports, while deliveries of crude oil and coal into Eastern Canada played the most significant role in imports.

This improvement in the primary energy trade balance was slightly offset by an increased reliance on imported secondary fuels. Over the period of the review, secondary energy consumption has become more important within total energy consumption and although the nation has expanded its capacity to convert primary into secondary forms it nonetheless imported some 165 t. B.t.u. in 1958, growing to 256 t. B.t.u. in 1964. Exports of secondary energy were at minimal levels throughout the period.

In total, therefore, the net deficit in Canada's energy trade balance was progressively reduced from 860 t. B.t.u. in 1958 to 409 t. B.t.u. in 1964.

TABLE 3. Exports - Imports of Energy, Canada, 1958 - 64

	1958	1959	1960	1961	1962	1963	1964
				t. B.t.u.			
Primary energy:							
Exports	298	320	402	614	905	949	1,060
Imports	1,002	1,040	1,060	1,096	1,118	1,249	1,238
Secondary energy:							
Exports	9	13	16	10	22	24	25
Imports	165	219	205	166	172	187	256
Total exports	**307**	**333**	**418**	**624**	**927**	**973**	**1,085**
Total imports	**1,167**	**1,259**	**1,265**	**1,262**	**1,290**	**1,436**	**1,494**

For net imports of primary fuels the trend has been more stable than imports of secondary fuels which reflect the necessarily irregular growth in Canada's conversion capacity, mainly oil refineries. Growth in refinery capacity, whether in the form of new refineries or of extensions to existing plant, follows a stepped pattern and, although refining capacity showed a marked increase over the period under review, selective gaps remained in the ability to meet demands for specific types of products. As a result, approximately one tenth of the secondary energy consumed, on average, was imported each year.

C. Conversion

Primary energy available can be consumed in its natural form or may be converted into a secondary form and disposed of to exports, stock-change, consumption, etc. Energy in secondary form is increasingly demanded and consumed in developed countries except those nations which have ample hydro-electricity and natural gas resources — the two primary energy forms which do not require conversion to satisfy consumer demand. Canada possesses considerable resources of these two forms but nevertheless still displays a trend toward secondary energy use; between 1958 and 1964 the conversion rate increased from 58 to 62 per cent. Because secondary energy produced may in part be utilized to produce other secondary energy such as fuel oil used at thermal stations to generate electricity, and because some secondary energy may be exported, the trend to secondary energy may best be gauged from the percentage of total energy consumption which is consumed in secondary form. Here again the trend is an increase, from 57.9 per cent in 1958 to 60.5 per cent in 1964. This gain is accounted for largely by the substantial increase in the use of coal at thermal stations, especially in Ontario, Saskatchewan and Alberta where few economic water sites for development as hydro stations remain. This trend to coal-fired stations has helped to reverse the decline in coal.

Accompanying the growth in thermal capacity was a marked increase in the efficiency of conversion at thermal stations. In 1958, 104 t. B.t.u. of primary and secondary forms was used to produce 24 t. B.t.u. of electric power, giving an efficiency factor of 23 per cent. The corresponding 1964 figures are 261 t. B.t.u. needed to produce the 73 t. B.t.u., resulting in an efficiency factor of 28.1 per cent.

D. Consumption

Whereas changes in the production and availability of energy at the national level during the period were relatively dramatic, only minor changes occurred in the structure of the country's utilization pattern, with each consuming sector enjoying roughly the same share in 1964 as it did in 1958. Salient features emerge when regions are compared, however, not only in terms of the importance of each sector, but also in terms of the importance of each fuel.

TABLE 4. Percentage Contribution of Each Energy Form to Consumption Totals

	Canada		Atlantic		Quebec		Ontario		Prairies		British Columbia, Yukon and Northwest Territories	
	1958	1964	1958	1964	1958	1964	1958	1964	1958	1964	1958	1964
Coal, coke and coke oven gas	20.1	11.8	26.5	14.6	15.8	6.8	31.0	21.0	9.4	3.8	8.3	3.3
Motor gasoline	17.9	17.6	15.9	16.0	15.3	16.3	18.5	17.9	20.0	19.0	18.2	17.9
Fuel oils	22.5	24.7	23.8	35.1	29.8	38.1	23.1	24.9	13.0	6.5	21.9	20.5
Other petroleum fuels	12.9	12.8	20.7	22.6	14.5	13.5	9.2	7.7	14.1	15.5	16.2	17.8
Natural gas	11.2	18.7	0.1	—	0.6	3.9	5.9	16.1	36.9	48.0	7.6	18.5
Electricity	11.7	12.5	6.8	8.2	19.3	18.9	11.0	11.6	4.5	6.0	16.1	17.6
Wood	3.7	1.9	6.2	3.5	4.6	2.5	1.3	0.8	2.1	1.2	11.7	4.4
Totals	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**	**100.0**

In relative terms Table 4 shows a decline in the importance of coal, especially in Eastern Canada where, because of its availability, it controlled a large share of the market in 1958. Fuel oils have replaced coal where it has lost ground in the Atlantic and Quebec regions, while in Ontario the completion of natural gas supply and distribution facilities has allowed this fuel to make inroads into coal's traditional markets. The growth fuel in the western part of the country has been natural gas, to the disadvantage of fuel oils, wood and coal.

TABLE 5. t. B.t.u. Contribution of each Energy Form to Consumption Totals

	Canada		Atlantic		Quebec		Ontario		Prairies		British Columbia, Yukon and Northwest Territories	
	1958	1964	1958	1964	1958	1964	1958	1964	1958	1964	1958	1964

Totals	**2,739**	**3,659**	**275**	**300**	**658**	**902**	**995**	**1,341**	**606**	**772**	**254**	**344**

As noted previously, the demand which each consuming sector makes on the total at the national level has shown little change between 1958 and 1964. Certain regional variations, however, are worthy of note. Some 15 per cent of the Prairie region's total consumption goes to the fuel supply industry, contrasted to a national average of 8 per cent. This is, of course, hardly surprising in that the Prairies supply some 75 per cent of the nation's primary energy production. In British Columbia a smaller than average proportion of energy consumption goes to the domestic sector, which is again hardly surprising, in view of the mildness of the climate. In Ontario, the industrial centre of Canada, the industrial sector consumes a greater share than the national average.

E. Relationship Between Energy Consumption and Other Economic Indicators

The relationship between energy consumption and other economic indicators is shown in Table 6 which compares annual percentage increases from 1958 to 1964. This comparison is made at the national level only because of the scarcity of suitable economic indicators for regions. At the national level total energy consumption, which increased at an average annual rate of 4.9 per cent, bore a particularly marked relationship to growth in the Gross Domestic Product in constant 1961 dollars and, to a lesser extent to the other indicators.

TABLE 6. Annual Percentage Increases in Energy Consumption and Other Factors

	1959/1958	1960/1959	1961/1960	1962/1961	1963/1962	1964/1963	Average annual growth rate
Total energy consumption	6.92	2.61	2.68	5.65	5.27	6.65	4.9
GDP at factor cost – Constant dollars	5.17	2.40	2.04	6.95	5.05	6.41	4.7
Labour employed	2.86	1.62	1.51	2.82	2.39	3.67	2.5
Industrial energy per member of labour force employed	5.55	0.63	0.93	3.51	2.14	4.97	2.9
Per capita consumption of energy	4.45	0.39	0.61	3.76	3.46	4.76	2.9
Per capita income – Current dollars	2.98	3.10	1.89	6.60	4.51	4.89	4.0

All the indicators reflect a slowing in the growth rate of the economy in 1960-61, with the exception of per capita income whose growth rate maintained itself in 1960, a year when other growth rates appreciably slackened. However, this indicator is in current dollars and must be regarded with some caution. Per capita consumption of energy followed the same path as did industrial consumption per member of the labour force employed. However the latter showed a greater contraction than labour employed in 1960-61, and in general expanded more rapidly than labour in buoyant times.

Regional anomalies are numerous. For example, the Prairie region, a relatively non-industrialized area, has a well above average per capita consumption of energy. This is probably a result of climatic conditions, the area as a whole experiencing the severest winters in Canada. The Maritimes have the lowest per capita energy consumption but even this figure, when translated into effective energy consumed, would be lower because of the significance of coal's role in the region. Then again, the average B.t.u. consumption for vehicle registered in the Prairie provinces is the highest of all 5 regions. Average motoring distances are undoubtedly greater, but probably part of the explanation is to be found in the fact that farm machinery is not registered as "road vehicle" but consumes substantial quantities of automotive or "road vehicle" fuels.

The following table of 1964 data indicates where regional variations may occur.

TABLE 7. Regional Data, 1964

		Region					Total
		1	2	3	4	5	
Population	%	10.3	28.9	34.2	17.3	9.3	100.0
Labour employed	%	8.2	27.6	37.4	17.6	9.2	100.0
Labour employed as per cent of population	%	27.4	32.9	37.6	34.9	34.0	
Total energy consumption	%	8.2	24.7	36.6	21.1	9.4	100.0
Industrial consumption	%	8.1	25.6	38.3	18.2	9.8	100.0
Domestic consumption	%	9.6	26.7	36.5	19.4	7.8	100.0
Per capita consumption of energy (million B.t.u.)		152	162	204	232	194	
Per capita income	$	1,251	1,615	2,134	1,765	2,071	

Conclusion

The impact of energy on the Canadian economy can be seen in a number of ways. The nation has the second largest per capita consumption of energy in the world. Its energy industries are significant contributors to the wealth of the nation, having a capital formation of about 2.1 billion dollars and furnishing some 2.5 billion dollars to the Gross National Product each year. The development of a total energy statistics programme should provide economists with more sophisticated tools to analyse the energy economy, and should thereby assist industry to meet the challenges of the future.

Appendix I. Energy Supply – Demand Balance, Canada 1964 in Thousand Million B.t.u.'s

	Coal	Coal derivatives	Liquefied petroleum gases	Crude oil	Petroleum derivatives	Natural gas	Electricity	Wood	Total

REAL DOMESTIC PRODUCT,[1] FIRST QUARTER 1969

Canada's RDP seasonally adjusted, advanced by 2.0 per cent from the fourth quarter of 1968, to record the second strong consecutive quarterly increase in output. A similar advance occurred in both the service-producing and the goods-producing industry components. With the exception of small declines in forestry and in fishing and trapping, each of the industry divisions rose.

The largest contribution to the advance in RDP originated in transportation, storage and communication. The percentage change in this division was the largest since the first quarter of 1965. It was also very widespread, with every component higher than its fourth-quarter level.

Four industry divisions (trade, construction, manufacturing and community, business and personal services) made roughly equal contributions to the over-all increase. The majority of the increase in trade came from wholesale trade, particularly industrial and transportation equipment and supplies, construction materials, and household electrical appliances. Within retail trade there were widespread increases. The increase in construction came mostly from residential construction (erection of single-dwelling units increased more than multiple-dwelling units). Non-durables were responsible for the increase in manufacturing, as durables were slightly lower than their fourth-quarter level. Within non-durables pulp and paper mills recorded by far the most significant increase. Within durables, drops in motor vehicles and part and in saw mills more than offset increases in the other components. The increase in the community, business and personal services division originated mainly in education and business services.

---

[1] It should be noted that the movements described here may not always coincide with the constant price gross national expenditure data in the quarterly national income and expenditure accounts, due to conceptual and statistical differences. Among these differences are factor cost versus market price valuation, the use of domestic versus national boundaries, and the use of different weight-base periods.

ABOUR FORCE (More detail in Table 19)

TOTAL LABOUR FORCE, EMPLOYMENT, AND UNEMPLOYMENT INCREASED IN APRIL. UNEMPLOYMENT WAS 4.4 PER CENT OF THE LABOUR FORCE.

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2] Includes logging, fishing, trapping and hunting. [3] Includes mechanical and construction. [4] Includes a small number in non-specified occupations. [5] Does not include students entering Canada on students' visas. [6] Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. **Source: Quarterly Bulletin, Department of Manpower and Immigration.**

[1] Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for ithdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the eries. [2] Includes residual error of estimate. **Source: at bottom of Table 14.**

---

[1] Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. Th estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. [2] Th labour force as a percentage of the population 14 years of age and over. [3] The unemployed as a percentage of the labour force. **Source: Labour Force Bulleti (71-001), D.B.S.**

[1] See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. [2] Canada totals, obtained by summing t seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. The small differences result from the seasonal adjustment the Canada and regional data having been carried out independently of each other. **Source: The Labour Force, (71-001) D. B. S.**

---

[1] In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. [2] The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. [3] Includes miscellaneous manufacturing industries. [4] Includes also publishing and allied industries. [5] Includes also the storage and communication industries. **Source: Labour Gazette, Department of Labour.**

*Revised monthly data will be available later.

[1] The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2] Excludes agriculture, fishing, trapping and public administration and defence. [3] Includes storage, electric power, gas and water utilities. [4] Excludes domestic service. **Source: Employment and Average Weekly Wages and Salaries, (72-002), D.B.S.**

[1] See footnote 1 and source in Table 28. [2] Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. [3] In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4] Except machinery and transportation equipment industries.

---

[1] Total commodities and services does not add up to 100 per cent; the portion of shelter which includes taxes and mortgage interest, and amounts to 8 per cent, is excluded. [2] These indexes measure **within each city** the percentage change in consumer prices from the base period to the subsequent time periods. **They cannot be used to compare levels of prices between cities.** **Source: Prices and Price Indexes (62-002), D.B.S.**

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. [2] Total manufacturing inventory owned by manufacturers including warehouse stocks. [3] Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. [4] Annual figures for inventories and unfilled orders are end of December values.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

---

[1] Monthly shipments represent an estimated projection of the latest available Census of Manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. **Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.**

[1] Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2] Intended for cigarettes. [3] Includes sales to wholesalers or retailers. [4] Subject to Excise Tax. [5] Includes sales for ships' stores and for export. [6] End of period. [7] Includes smoking, chewing and twist. **Sources: Tobacco and Tobacco Products Statistics Quarterly (32-014), D. B. S.; and Department of National Revenue.**

[1] Prior to 1964 data are not entirely comparable since they are on a production basis. [2] Includes slims and stretch pants. [3] Made from woven fabrics: shorts. [4] Starting with first quarter of 1968, "women's and Misses' category" becomes "Women's, Misses' and Juniors'". Data are not changed. **Source: Garment Shipments (34-001), D. B. S.**

---

[1] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [2] 100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [3] Customs exports. [4] Mill shipments destined for export. **Sources: Pulpwood and Wood Residue Statistics (25-001), Trade of Canada, Exports (65-004), D.B.S; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. Figures on net shipments relate to rolled steels products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [2] Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. [3] Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. [4] Excluding shipments for re-processing at maker's own plant. **Source: Primary Iron and Steel (41-001), D. B. S.**

---

[1] Production plus imports less re-exports. [2] Commencing January 1967, the value of new motor vehicles sold in Canada (as reported by manufacturers and distributors) was based on "actual cost to purchaser" rather than the suggested list price as in the past. **Sources: Motor Vehicle Shipments (42-002), New Motor Vehicle Sales (63-007), Trade of Canada, Imports (65-007), Exports (65-004), and Credit Statistics (61-004) D. B. S.**

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] Electric and other. [5] Excludes apartment type machines. [6] End of period. **Sources: Domestic Refrigerators and Freezers (43-001), Domestic Washing Machines and Clothes Dryers (43-002), Trade of Canada, Exports (65-004), Imports (65-007), D.B.S.**

---

[1] These totals include all generating agencies producing over ten million kilowatt hours per year. [2] These columns include all generating utilities and generating industries respectively, producing over ten million kilowatt hours per year. [3] Less imports. [4] Total net generation less net exports. **Source: Electric Power Statistics, (57-001), D. B. S.**

---

[1] Barrels of 35 Canadian gallons. [2] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [3] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [4] Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. [5] Includes inventories at end of period being held at gas plants and in storage caverns. [6] Includes stove oil, kerosene and tractor fuel. [7] Includes aviation gasoline and aviation turbo fuel. [8] Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. [9] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. **Source: Refined Petroleum Products (45-004), D. B. S.**

[1]The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. **Source: Building Permits (64-001), D.B.S.**

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. [2] End of period. **Source: New Residential Construction (64-002), D. B. S.**

[1] Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. [2] Planks and boards, flooring and square timber. [3] Hollow blocks including fireproofing and load-bearing tile. [4] For building insulation only. [5] Figures cover the production of firms which normally account for 90 per cent of the total for Canada. [6] Factory sales of firms which normally account for 96% of total Canadian production. **Source: Concrete Products (44-002), Products made from Canadian Clays (44-005), Asphalt Roofing (45-001), Rigid Insulating Board (36-002), Iron Castings and Cast Iron Pipes and Fittings (41-004), Steel Wire and Specified Wire Products (41-006), Gypsum Products (44-003), Mineral Wool (44-004), Sales of Paints, Varnishes and Lacquers (46-001), Production, Shipments and Stocks on Hand of Sawmills (35-002), (35-003) monthly, (35-204) annual and Trade of Canada, Imports (65-007), Exports (65-004), D. B. S.**

Note: Components may not add to totals due to rounding. [1] The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. [2] Excluding trucks. [3] The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. **Source: Farm Implement and Equipment Sales (63-009), D.B.S.**

[1] These indexes are available for January, April and August only. [2] Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. [3] Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1967 are final prices.From August 1, 1967 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. [4] Barley No. 1 feed; hogs grade "B" alive. [5] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. [6] Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. [7] Quotations refer to steers of all weights. [8] Grade "B" hogs. **Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001); Index Numbers of Farm Prices of Agricultural Products (62-003), D. B. S. and Livestock and Meat Trade Report, Dept. of Agriculture.**

[1] Department store stocks at end of period at selling value. The sales and stocks data are revised series based on the results of the 1961 Census of Merchanlising and Service Establishments. [2] Due to changes in definition of department stores and the introduction of general merchandise stores, formerly included in all ther stores, the 1968 and 1969 figures are not comparable with the data of previous years. **Source: Department Store Sales and Stocks (63-002), D. B. S.**

[1] The figures in the first four columns, i.e. all countries, United States, United Kingdom and all other countries, for the period April 1966 through July 1967 have been revised to account for delays in the receipts of customs documents. The revisions have not been extended to columns of figures for other countries, and their sum differs from the revised "all other countries" and "Total Imports" shown in this table. [2] Includes Belgium, Luxembourg, France, Germany, Italy and Netherlands.

Source: Trade of Canada, Imports (65-007), D. B. S.

[1] Column numbers refer to tables 93 and 94. [2] Includes special transaction-trade, not shown separately. [3] Includes scrap. [4] The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [5] Total imports revised to account for delays in the receipts of customs documents for the period April 1966 – July 1967 are: in 1966, April (822.4), May (938.4), June (900.6), July (792.8), August (818.2), Sept. (825.6), Oct. (936.2), Nov. (961.0), Dec. (872.0) and in 1967, Jan. (873.7), Feb. (766.2), March (851.8), April (944.5), May (1,053.8), June (977.4) and July (915.5).

[1] Monthly averages for 1966 and 1967 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Data in th table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of $500,000 or over. Includes operations of United State railways operating in Canada but excludes operations of Canadian railways in the United States. [3] Includes traffic interchanged between Canadian railways. **Sources Railway Operating Statistics (52-003) monthly, and (52-206) annual, D.B.S.**

[1] Includes Class I and Class II carriers only. These are trucking firms having $100,000 or more gross annual operating revenues. [2] Includes Class I carrier only. These are carriers having $100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services ar included. [3] Includes Class I carriers only. These are carriers having $100,000 or more gross annual revenues primarily from urban transit operations. Data are tota for motor bus, trolley coach, street car, subway and chartered services. **Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-00 monthly, and Urban Transit (53-003) monthly, D. B. S.**

[1] Monthly averages for years 1965 and 1966 differ from the averages of the monthly data due to revisions which cannot be allocated by months. [2] Includes heduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over $60, 000 annually prior to January, 64 and over $100, 000 annually since. [3] United States and other foreign carriers having scheduled services into and out of Canada. Excludes passengers in transit ough Canada. [4] Cargo includes air freight and express but excludes mail and excess baggage. [5] Data prior to 1964 do not include bulk transportation. Because survey limitations, data on bulk transportation after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of ,000 lbs. **Source: Civil Aviation (51-001), D. B. S.**

---

[1] The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does n include failures, sales or seizures carried out under other legislation.The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario Prairie provinces and British Columbia from the total. [2] In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements ma under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. **Source: Commerci Failures (61-002) Quarterly, D. B. S.**

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are aver-
es of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Mainly deposits of foreign banks. [3] Capital, rest fund and divided profits as at the latest fiscal year-end. [4] Including issues payable in foreign currency. [5] Securities purchased direct from issuer with a term of less than e year at time of issue are classified as loans. [6] Excluding Canadian day-to-day loans. [7] Loans to grain dealers and exporters. [8] Loans to finance purchase of nada Savings Bonds at time of issue. [9] Total of foreign funds, short term foreign investments and other foreign currency assets less foreign currency liabilities. ncluding loans to instalment finance companies. **Source: Statistical Summary of Bank of Canada.**

[1] The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net fits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all ıpanies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in ıada (excluding government-owned companies). [2] As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely ıparable with data where the establishment is the reporting unit. [3] Includes also the furniture and furnishings industry. [4] Includes the primary metal, the metal ricating, the machinery and the transportation equipment industries. [5] Includes tobacco products, leather and miscellaneous manufacturing industries. [6] Includes o storage and communication industries. [7] Includes agriculture, forestry, fishing and construction. **Source: Corporation Profits (61-003), D. B. S.**

---

[1] The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. [2] The headings for "b metals" and "industrial mines" are not found in the Standard Industrial Classification. [3] Combines the industrials, utilities and finance common stocks. [4] Stoc included in industrial mines are listed on the exchanges as industrials, Their operations include smelting and refining. [5] Includes also the machinery industr (except electrical machinery) and the transportation equipment industries. [6] Stocks included in the mining index are for producing mines. **Sources: Pri Movements (62-001), and Prices and Price Indexes (62-002), D.B.S.**
